GOVERNING BOARD
CONTRA COSTA COMMUNITY COLLEGE DISTRICT
OF CONTRA COSTA COUNTY
MARTINEZ, CALIFORNIA

REPORT NO. 82-D

DATE May 25, 2011

PURPOSE Resolution Certifying a Final Supplemental Environmental Impact Report (SEIR) for the New Brentwood Center – ROLL CALL VOTE REQUIRED

TO MEMBERS OF THE GOVERNING BOARD

RECOMMENDATION

It is recommended that the Resolution Certifying the Final Supplemental Environmental Impact Report for the New Brentwood Center, which is provided by separate cover, be adopted.

FUNDING SOURCE

Funding for the SEIR and the new Brentwood Center project will come from Measure A 2006 local bond funds.

BACKGROUND

The District is required to comply with the requirements of the California Environmental Quality Act (CEQA) for the new Brentwood Center project. The District prepared the new Brentwood Center SEIR to supplement the Vineyards at Marsh Creek and Annexation Sites Environmental Impact Report (Vineyards EIR), certified by the City of Brentwood in 2004 for the Vineyards at Marsh Creek development (Vineyards Project). The SEIR was prepared to analyze the potential environmental effects that may result from the new Brentwood Center community college use proposed on a portion of the Pioneer Square site within the Vineyards Project. The community college use would replace the Mixed-Use Business Park uses for which the Pioneer Square site is designated.

The Final SEIR is composed of the following elements:
• draft SEIR and appendices;
• list of persons, organizations and public agencies that commented on the draft SEIR;
• copies of all comments received;
• written responses to those comments; and
• revisions to the draft SEIR resulting from comments.

Certification is the first step in the CEQA approval process for the project. Following certification by the Governing Board, the Board will be asked to consider a separate resolution to approve the new Brentwood Center project.

Disposition APPROVED Date MAY 25 2011
Governing Board
RESOLUTION NO. 82-D OF THE GOVERNING BOARD OF THE
CONTRA COSTA COMMUNITY COLLEGE DISTRICT
CERTIFYING A FINAL SUPPLEMENTAL ENVIRONMENTAL
IMPACT REPORT FOR THE
NEW BRENTWOOD CENTER PROJECT

WHEREAS, the Contra Costa Community College District ("District") proposes to
construct a new education center ("New Brentwood Center" or "Project") on a 17-acre site
("Project Site") located in the City of Brentwood in eastern Contra Costa County, generally
west of the intersection of the State Route 4 (SR 4) Bypass and Marsh Creek Road. The
Project Site is within the larger Vineyards at Marsh Creek Project ("Vineyards Project"), and is
a portion of the 27-acre Pioneer Square site, located northeast of Vineyards Parkway. The
Project Site is comprised of the following Assessor's Parcel Nos.: 007-570-001, -003, -004, -
005, -006 and -007, 007-580-001, -002, -003, and -004; and

WHEREAS, the New Brentwood Center would construct two, approximately 44,000-
square-foot buildings for a total of approximately 88,000 square feet of classroom/office
space and would serve a maximum of 5,000 full-time and part-time students. Each building
would be a maximum of 35 feet in height. Two surface parking lots, landscaping and other
site improvements would also be constructed; and

WHEREAS, the City of Brentwood ("City") certified the Vineyards at Marsh Creek and
Annexation Sites Environmental Impact Report ("Vineyards EIR") for the Vineyards Project in
2004 pursuant to the requirements of the California Environmental Quality Act and the CEQA
Guidelines (collectively "CEQA"); and

WHEREAS, the Vineyards EIR analyzed approximately 27 acres of mixed-use
development on the Pioneer Square site, including commercial, office, senior apartments,
hotel and conference center, and assisted care facilities, and analyzed approximately 29
acres of nearby land ("Cowell Property") proposed for annexation to the City and
development of a future community college by the District for a maximum of 5,000 students; and

WHEREAS, the Cowell Property was one of two annexation sites studied in the
Vineyards EIR and was later annexed to the City; and

WHEREAS, the New Brentwood Center is that earlier community college that was
proposed on the Cowell Property, but is now relocated to a portion of the Pioneer Square site; and

WHEREAS, the District prepared a Supplemental Environmental Impact Report
("SEIR") pursuant to CEQA to supplement the Vineyards EIR and analyze the potential
environmental effects that may result from the New Brentwood Center; and

WHEREAS, the New Brentwood Center Draft SEIR was circulated for a 45-day public
review period beginning February 1, 2011, and ending on March 17, 2011 (State
Clearinghouse No. 2010112046); and

WHEREAS, pursuant to CEQA, including without limitation, Section 21091(d)(2)(A) of
the Public Resources Code and Sections 15088 and 15089 of the CEQA Guidelines, the
District has responded to all the environmental comments that were submitted on the Draft SEIR during the public review period and a Final SEIR has been completed; and

WHEREAS, following review of the Draft SEIR comments and responses, which include expanded discussion of impacts and mitigation measures, District staff determined that there is no substantially new information that would be cause to recirculate the Draft SEIR pursuant to CEQA, including without limitation, Section 15068.5(b) of the CEQA Guidelines; and

WHEREAS, on May 13, 2011, a public hearing notice was mailed to property owners and interested parties regarding the Board’s consideration of project approval and certification of the Final SEIR. This notice together with written responses to public agency comments were mailed to the agencies commenting on the Draft SEIR; and

WHEREAS, on May 25, 2011, the Board held a duly-noticed public hearing on the Final SEIR, accepting all oral and written public testimony and the written report of District staff; and

WHEREAS, the location and custodian of records with respect to all relevant documents which constitutes the administrative record are as follows: Chief Facilities Planner, Contra Costa Community College District, 500 Court Street, Martinez, CA 94553.

NOW, THEREFORE, THE BOARD HEREBY RESOLVES, to certify the New Brentwood Center Final SEIR based on the following findings:

FINDINGS

1. The Final SEIR has been completed in compliance with CEQA.

2. The Governing Board reviewed and considered all information contained in the Final SEIR, comments from public agencies and other interested parties, and the District’s responses to such comments.

3. The Final SEIR reflects the District’s independent judgment and analysis.

ADOPTED, SIGNED AND APPROVED this 25th day of May, 2011.

John T. Nejedly, President, Governing Board, Contra Costa Community College District

Tomi Van de Brooke, Vice President, Governing Board

Sheila A. Grilli, Secretary, Governing Board
I, John T. Nejedly, President of the Governing Board of the Contra Costa Community College District, do hereby certify that the foregoing Resolution was adopted by the Governing Board of said District at a meeting of said Board held on the 25th day of May 2011, and that it was so adopted by the following vote:

AYES: John E. Márquez, Sheila A. Grilli, John T. Nejedly, Toml Van de Brooke, Robert Calone, (Student Trustee Advisory Vote)

NOES: 

ABSENT: 

ABSTAIN: 

John T. Nejedly, President, Governing Board, Contra Costa Community College District

Attested to:

Sheila A. Grilli, Secretary, Governing Board

REPORT NO. 82-E DATE May 25, 2011

PURPOSE Resolution Approving the New Brentwood Center Project and Adopting
Findings of Fact, a Statement of Overriding Considerations and a Mitigation
Monitoring and Reporting Program – ROLL CALL VOTE REQUIRED

TO MEMBERS OF THE GOVERNING BOARD

RECOMMENDATION

It is recommended that the attached Resolution Approving the New Brentwood Center
Project and Adopting Findings of Fact, a Statement of Overriding Considerations and a Mitigation
Monitoring and Reporting Program, be adopted.

FUNDING SOURCE

Funding for this environmental impact analysis and for the new Brentwood Center
project will come from Measure A 2006 local bond funds.

BACKGROUND

The District prepared the New Brentwood Center Supplemental Environmental Impact
Report (SEIR) to supplement the Vineyards at Marsh Creek and Annexation Sites
Environmental Impact Report (Vineyards EIR) certified by the City of Brentwood in 2004 for
the Vineyards at Marsh Creek development (Vineyards Project). The SEIR was prepared to
analyze the potential environmental effects that may result from the new Brentwood Center
community college use proposed on a portion of the Pioneer Square site within the
Vineyards Project. The community college use would replace the Mixed-Use Business Park
uses for which the Pioneer Square site is designated.

Although the project relocates the planned Brentwood center from the Cowell site to
the Pioneer Square site, the District does not have the authority to change the zoning of the
Cowell site which is presently designated Community College by the City’s General Plan.
California Environmental Quality Act (CEQA) conventions direct impact analysis to consider
current land uses. Accordingly, the analysis in the supplemental EIR analyzes the impact of
a college center located on the Cowell site and a new college center on the Pioneer Square
site, both operating at the same time.

However, the SEIR further expanded the reasonable range of alternatives in the
Vineyards EIR by analyzing an alternative land use for the Cowell Property, given that the
project proposes to relocate the community college use to a portion of the Pioneer Square
site and given that it is not likely that two community college campuses would ever be
developed in close proximity to one another.
Exhibit A

NEW BRENTWOOD CENTER

CEQA Findings of Fact
(Pursuant to the State CEQA Guidelines)

Final Supplemental Environmental Impact Report
(State Clearinghouse No. 2010112046)

May 2011
1.0 INTRODUCTION

This statement of findings addresses the potentially significant environmental impacts associated with the proposed New Brentwood Center (project) located in the City of Brentwood, Contra Costa County, California and are made pursuant to Section 15091 of the California Environmental Quality Act Guidelines (CEQA Guidelines), which provide that:

(a) No public agency shall approve or carry out a project for which an EIR has been certified which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. The possible findings are:

(1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.

(2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.

(3) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.

(b) The findings required by subsection (a) shall be supported by substantial evidence in the record.

Section 15092 of the CEQA Guidelines further stipulates that:

(b) A public agency shall not decide to approve or carry out a project for which an EIR was prepared unless either:

(1) The project as approved will not have a significant effect on the environment, or

(2) The agency has:

(A) Eliminated or substantially lessened all significant effects on the environment where feasible as shown in findings under Section 15091, and

(B) Determined that any remaining significant effects on the environment found to be unavoidable under Section 15091 are acceptable due to overriding concerns as described in Section 15093.

According to Section 15093 if the CEQA Guidelines:

a) CEQA requires the decision-making agency to balance, as applicable, the economic, legal, social, technological, or other benefits of a proposed project against its unavoidable environmental risks when determining whether to approve the project. If the specific economic, legal, social, technological, or other benefits of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable."
The SEIR also analyzed a more realistic Alternative Land Use Designation for the Cowell Property where by two community colleges would not be developed and the Mixed-Use Business Park uses displaced by the community college on the Pioneer Square site would be relocated to the Cowell Property.

1.2 ENVIRONMENTAL REVIEW PROCESS

In accordance with the requirements of CEQA and the CEQA Guidelines, a Notice of Preparation (NOP) of a Draft SEIR was filed with the State Clearinghouse (SCH) Office of Planning and Research (OPR) on November 18, 2010. The NOP was distributed to public agencies and interested parties for a 30-day public review period, which extended from November 19 to December 20, 2010.

A Notice of Completion (NOC) of the Draft SEIR was filed with the SCH OPR on February 1, 2011. The Draft SEIR was circulated for a 45-day public review period, which ended on March 17, 2011. During this public review period, the District received written comments on the Draft SEIR. Section 15088 of the CEQA Guidelines requires that the lead agency responsible for the preparation of an EIR evaluate comments on environmental issues received from parties who reviewed the Draft EIR and prepare a written response addressing each of the comments. A Final SEIR was prepared for the proposed project. The Final SEIR assembles in one document all of the environmental information and analysis prepared for the proposed project, including comments on the information and analysis contained in the Draft SEIR and responses by the District to those comments.

Pursuant to Section 15132 of the CEQA Guidelines, the Final SEIR consists of the following:

(a) The Draft SEIR, including all of its appendices.

(b) A list of persons, organizations, and public agencies commenting on the Draft SEIR.

(c) Copies of all letters received by the District during the Draft SEIR public review period and responses to significant environmental points concerning the Draft SEIR raised in the review and consultation process.

(d) Any other information added by the lead agency.

2.0 CEQA FINDING OF INDEPENDENT JUDGMENT

The District is the lead agency with respect to the proposed project pursuant to the Section 15367 of the CEQA Guidelines. As noted above, Section 15091 of the CEQA Guidelines requires that the lead agency prepare written findings for identified significant impacts, accompanied by a brief explanation for the rationale for each finding. The District has reviewed the Final SEIR. The Final SEIR for the project identified potentially significant effects that could result from project implementation. However, the District finds that the inclusion of certain mitigation measures as part of the project will reduce most, but not all, of those effects to less than significant levels. Those impacts that are not reduced to less than significant levels are identified and overridden due to specific project benefits identified specifically in a Statement of Overriding Considerations (provided under separate cover).

In accordance with CEQA and the CEQA Guidelines, the District adopts these findings as part of its approval of the project. Pursuant to Public Resources Code § 21082.1(c)(3), the District also finds that the Final SEIR reflects the District’s independent judgment as the lead agency for the project.
b) When the lead agency approves a project which will result in the occurrence of significant effects which are identified in the final EIR but are not avoided or substantially lessened, the agency shall state in writing the specific reasons to support its action based on the final EIR and/or other information in the record. The statement of overriding considerations shall be supported by substantial evidence in the record.

c) If an agency makes a statement of overriding considerations, the statement should be included in the record of the project approval and should be mentioned in the notice of determination. This statement does not substitute for, and shall be in addition to, findings required pursuant to Section 15091.

As required by CEQA, the Contra Costa Community College District (District), in adopting these findings, must also adopt a Mitigation Monitoring and Reporting Program (MMRP) for the project. The MMRP, which is incorporated by reference and made a part of these findings, meets the requirements of Section 15097 of the CEQA Guidelines by providing for the implementation and monitoring of measures intended to mitigate potentially significant effects of the project.

Whenever these findings specifically refer to a mitigation measure that will avoid or mitigate a potentially significant impact, that specific mitigation measure is hereby made a specific condition of approval of the New Brentwood Center project.

1.1 PROJECT SUMMARY

The District prepared the New Brentwood Center Supplemental Environmental Impact Report (SEIR) to supplement the Vineyards at Marsh Creek and Annexation Sites Environmental Impact Report (Vineyards EIR) certified by the City of Brentwood (City) in 2004 for the Vineyards at Marsh Creek development (Vineyards Project). The SEIR was prepared to analyze the potential environmental effects that may result from the New Brentwood Center community college use proposed on a portion of the Pioneer Square site within the Vineyards Project. The community college use would replace the Mixed-Use Business Park uses for which the Pioneer Square site is designated.

As part of the Vineyards Project, the Vineyards EIR analyzed approximately 27 acres of mixed-use development on what was then referred to as the "Village Center" and what was later renamed "Pioneer Square." Approved Mixed-Use Business Park uses at Pioneer Square include commercial, office, senior apartments, hotel and conference center, and assisted care facilities. Additionally, the Vineyards EIR analyzed approximately 29 acres of nearby land proposed for annexation to the City and development of a future community college by the District for a maximum of 5,000 students. This land, referred to as the "Cowell Property," was one of two annexation sites studied in the Vineyards EIR and was later annexed into the City.

The proposed project analyzed in the New Brentwood Center SEIR was that earlier community college proposal by the District in a new location: 17 acres of the 27-acre Pioneer Square site. Although the project represents the District's desire to move its proposed community college campus from the Cowell Property to a portion of the Pioneer Square site, no change in the City's Community College land use designation on the Cowell Property is proposed at this time. The proposed project would use 17 acres of the 27-acre Pioneer Square site for community college use instead of the Mixed-Use Business Park uses for which the 17 acres are designated.
3.0 ADMINISTRATIVE RECORD

The record, upon which all findings and determinations related to the approval of the project are based, includes the following:

- The SEIR and all documents referenced in or relied upon by the SEIR.
- All prior or present information (including written evidence and testimony) provided by District staff to the Governing Board relating to the SEIR and the project.
- All prior or present information (including written evidence and testimony) presented at any Governing Board meeting related to the project and the SEIR.
- The MMRP for the project.
- All other documents composing the record pursuant to Public Resources Code § 21167.6(e).
- The custodian of the documents and other materials that constitute the record of the proceedings upon which the District’s decisions are based is Ray Pyle, Chief Facilities Planner, or his designee. Such documents and other materials are located at the Contra Costa Community College District, 500 Court Street, Martinez, CA 94553.

4.0 FINDINGS OF FACT

The following sections make detailed findings with respect to the potential effects of the project and refer, where appropriate, to the mitigation measures set forth in the Final SEIR and the MMRP to avoid or substantially reduce potentially significant adverse impacts of the project. The SEIR and the administrative record concerning the project provide additional facts in support of the findings herein. The Final SEIR is hereby incorporated into these findings in its entirety. Furthermore, the mitigation measures set forth in the Final SEIR and the MMRP are incorporated by reference in these findings. The MMRP was developed in compliance with Section 15097 of the CEQA Guidelines and is contained in Chapter 11.0 (Mitigation Monitoring and Reporting Program) of the Final SEIR.

4.1 NO PROJECT IMPACT

Based on the analysis contained in the SEIR, the following impacts have been determined to fall within the category of no project impact:

- Transportation/Traffic (pedestrian access, bicycle access, on-site circulation, emergency access and transit access)

4.2 LESS THAN SIGNIFICANT IMPACTS

Based on the analysis contained in the SEIR, the following impacts have been determined to fall within the category of less than significant impact and do not require implementation of mitigation measures:

- Greenhouse Gas Emissions (generation of greenhouse gas emissions that could impact the environment, conflict with applicable greenhouse gas reduction plan, policy or regulation, and cumulative greenhouse gas emissions)
- Transportation/Traffic (near-term traffic at study intersections and project site access)
detours may periodically be required to allow heavy equipment movements or to facilitate construction activities directly adjacent to the street.

Findings

The District finds that, pursuant to Section 15091(a)(1) of the CEQA Guidelines, changes or alterations have been required in, or incorporated into, the project, which mitigate or avoid potentially significant traffic impacts during grading and construction activities, as identified in the Final SEIR. The District further finds that the change or alteration in the project or the requirement to impose the mitigation as a condition of project approval is within the jurisdiction of the District to require, and the mitigation is appropriate and feasible.

Facts in Support of Findings

Temporary traffic impacts during grading and construction of the proposed project would be less than significant with implementation of Mitigation Measure 4.4-3, which requires preparation and implementation of a Construction Traffic Management Plan.

4.4 ENVIRONMENTAL EFFECTS OF THE PROJECT WHICH ARE CONSIDERED UNAVOIDABLE SIGNIFICANT IMPACTS

This section identifies the significant and unavoidable impacts that require a statement of overriding considerations to be adopted by the District, pursuant to Section 15093 of the CEQA Guidelines, if the project is approved. Based on the analysis contained in the SEIR, the following impacts would be significant and unavoidable:

- Air Quality (exceed established thresholds during operation; conflict with applicable air quality management plan; and cumulatively contribute to the exceedance of established thresholds)
- Transportation/Traffic (degrade an acceptable intersection level of service (LOS) to an unacceptable LOS under cumulative project conditions)

As previously stated, the SEIR also analyzed a more realistic Alternative Land Use Designation for the Cowell Property, which would lessen the impacts and avoid all significant and unavoidable impacts.

4.4.1 Air Quality

Summary of Potential Impacts

An evaluation of potential air quality impacts that could result from implementation of the proposed project is provided in Section 4.2 (Air Quality) of the Draft SEIR.

Emissions generated by vehicle traffic associated with the proposed project would exceed established BAAQMD thresholds for reactive organic gas (ROG) and particulate matter (PM10). Despite implementation of operational mitigation measures, ROG and PM10 emissions would remain above BAAQMD thresholds. If mitigated levels of any criteria air pollutant or precursor would still exceed the applicable threshold of significance, the impact to air quality would remain significant and unavoidable.

The proposed project would result in significant long-term operational air quality impacts from ROG and PM10 emissions. The project’s exceedance of operational ROG (an ozone precursor) and PM10 emissions
proposed project) to the Cowell Property. The ten acres remaining at Pioneer Square would continue to allow Mixed-Use Business Park uses. This alternative would allow no different or greater intensity of uses than those analyzed in the Vineyards EIR.

5.1.1 Environmental Effects

Under the Alternative Land Use Designation, daily traffic trips would be reduced to those analyzed in the Vineyards EIR. Likewise, emissions generated by vehicle traffic would be reduced such that BAAQMD thresholds for ROG and PM$_{10}$ would not be exceeded and operational air quality impacts would be less than significant. Consequently, this alternative would not conflict with the air quality plan and cumulative air quality impacts would be less than significant. As such, all three significant and unavoidable air quality impacts would be avoided by the Alternative Land Use Designation.

The Alternative Land Use Designation would result in the same less than significant but mitigable short-term traffic impacts as the proposed project. Trip generation during the AM and PM peak hour would be reduced under the Alternative Land Use Designation and cumulative impacts at the intersection of SR 4 Bypass and Marsh Creek Road would be reduced. However, traffic patterns in the project vicinity would differ from those studied in the Vineyards EIR due to the relocation of land uses. Implementation of the Alternative Land Use Designation would not degrade operations at any of the study intersections. Therefore, the only significant and unavoidable cumulative traffic impact would be avoided by the Alternative Land Use Designation.

5.1.2 Feasibility

The Alternative Land Use Alternative is infeasible because the District is not the land use regulatory body with authority over the uses allowed on the Cowell Property, does not control the property, and cannot legally change the land use designation.

Education Code § 66700 provides that California Community Colleges are postsecondary schools and that the Board of Governors of the California Community Colleges prescribe minimum standards for the formation and operation of community colleges and exercise general supervision. Education Code § 66903(e) and 66904 require that the California Post Secondary Education Commission (CPEQ) advise the Legislature regarding the location of new institutions and campuses of public higher education. Before a community college acquires a new school site, Public Resource Code § 21151.2 requires written notice of the proposed acquisition to the local planning commission. This is also required by Government Code § 65402.

Given the requirements for review and approval at both the state and local levels, the possibility of the Cowell Property ever being approved for a community college subsequent to the development of the New Brentwood Center on the Pioneer Square site as analyzed in the SEIR is extremely unlikely. Neither the Board of Governors nor CPEQ would likely approve the acquisition of land for a community college that would be located near the New Brentwood Center. Additionally, the City of Brentwood noted in their comments on the Draft SEIR that “there should be no need to analyze a second campus.” The proposed project would move the community college from the Cowell Property (the site originally zoned for a community college) to the site studied in the SEIR. Although the District has no authority to change the land use designation on the Cowell Property, it is reasonable to assume that a community college would not be built there. The Contra Costa Community College District is the only community college district recognized by the Board of Governors of the California Community Colleges in Contra Costa County with jurisdiction to establish a community college campus in this area of the County, and the District is
4.3 POTENTIALLY SIGNIFICANT BUT MITIGABLE IMPACTS

Pursuant to CEQA Guidelines Sections 15091(a)(1) and 15092(b), and to the extent reflected in the SEIR and the MMRP, the District finds that changes or alterations have been required to, or incorporated into, the components of the project to mitigate or avoid potentially significant effects on the environment. Based on the analysis contained in the SEIR, the following impacts have been determined to fall within the category of impacts that can be reduced to less than significant levels with implementation of the mitigation measures set forth below:

- Air Quality (short-term impacts during grading and construction)
- Transportation/Traffic (temporary construction impacts)

4.3.1 Air Quality

Summary of Potential Impacts

An evaluation of potential air quality impacts that could result from implementation of the proposed project is provided in Section 4.2 (Air Quality) of the Draft SEIR. Grading and construction activities associated with development of the proposed project would result in short-term air quality impacts. Temporary air quality impacts would result from: 1) particulate (fugitive dust) emissions during grading and construction activities; and 2) exhaust emissions from construction equipment and the motor vehicles of the construction crew.

Findings

The District finds that, pursuant to Section 15091(a)(1) of the CEQA Guidelines, changes or alterations have been required in, or incorporated into, the project, which would mitigate or avoid potentially significant short-term air quality impacts during grading and construction activities, as identified in the Final SEIR. The District further finds that the change or alteration in the project or the requirement to impose the mitigation as a condition of project approval is within the jurisdiction of the District to require, and the mitigation is appropriate and feasible.

Facts in Support of Findings

Short-term air quality impacts during grading and construction of the proposed project would be less than significant with implementation of Mitigation Measure 4.2-1, which requires implementation of the Bay Area Air Quality District’s (BAAQMD’s) Basic Construction Mitigation Measures.

4.3.2 Transportation/Traffic

Summary of Potential Impacts

An evaluation of potential traffic impacts that could result from implementation of the proposed project is provided in Section 4.4 (Transportation/Traffic) of the Draft SEIR. Grading and construction activities associated with the proposed project would temporarily affect vehicular, pedestrian and bicycle circulation in the vicinity of the project site resulting in traffic impacts during the construction period. The proposed project would generate truck traffic for a variety of purposes throughout the construction schedule, including excavation, building material deliveries, concrete pours, etc. In addition, traffic...
would hinder the region’s ability to achieve compliance with the state ozone standards as expeditiously as practicable. Therefore, the proposed project would conflict with the 2010 Bay Area Clean Air Plan.

A project that exceeds the BAAQMD thresholds would also result in a cumulatively considerable impact. The proposed project’s operational emissions would exceed BAAQMD thresholds for ROG and PM$_{10}$. Therefore, the proposed project, in conjunction with related cumulative projects would be cumulatively considerable. Despite implementation of transportation demand management features (included as project design features), cumulative impacts would be significant and unavoidable.

**Findings**

The District finds that there are no feasible measures that would completely mitigate or avoid all potentially significant air quality impacts during project operation (Impacts 4.2-2, 4.2-3 and 4.2-4), as identified in the Final SEIR.

**Facts in Support of Findings**

The proposed project would include various design features that would reduce emissions of criteria pollutants related to mobile source and area source emissions. These measures primarily relate to energy efficiency and would not reduce ROG and PM$_{10}$. Because the operational mitigation measures would not reduce emissions below established thresholds, the impact would be significant and unavoidable. It should be noted that operational emissions for the Vineyards Project were also found to be significant and unavoidable.

As discussed above, the proposed project would conflict with the 2010 Bay Area Clean Air Plan. As there is no feasible mitigation, this impact would remain significant and unavoidable. Likewise, there are no feasible mitigation measures to reduce the project’s cumulative operational emissions resulting in a significant and unavoidable impact.

**4.4.2 Transportation/Traffic**

**Summary of Potential Impacts**

The intersection of State Route (SR) 4 Bypass and Marsh Creek Road is expected to operate at an unacceptable level of service (LOS) D during both peak hours under Cumulative No Project conditions. The addition of project traffic would increase the volume-to-capacity (V/C) ratio by more than 0.1. There is no feasible mitigation for this cumulative impact. As such, this impact would be significant and unavoidable.

**Findings**

The District finds that there are no feasible measures that would mitigate or avoid potentially significant cumulative traffic impacts (Impact 4.4-2), as identified in the Final SEIR.

**Facts in Support of Findings**

Under Cumulative conditions, three of the four study intersections are projected to operate at an acceptable LOS with or without the project, assuming development of a community college land use on both the Pioneer Square site and the Cowell Property. This assumption was made because the Cowell
STATEMENT OF OVERRIDING CONSIDERATIONS

The California Environmental Quality Act (CEQA) requires decision makers to balance, as applicable, the economic, legal, social, technological and/or other benefits of a project against its significant and unavoidable environmental impacts when determining whether to approve the project. If the specific economic, legal, social, technological and/or other benefits of the project outweigh the significant and unavoidable impacts, those impacts may be considered "acceptable" (CEQA Guidelines Section 15093(a)). When significant impacts are not avoided or lessened, CEQA requires the agency to state, in writing, the specific reasons for considering a project acceptable. Those reasons must be based on substantial evidence in the Final Environmental Impact Report (EIR) or elsewhere in the administrative record (CEQA Guidelines Section 15093(b)).

In accordance with the requirements of CEQA and the CEQA Guidelines, the Contra Costa Community College District (District) finds that the mitigation measures identified in the Final Supplemental Environmental Impact Report (SEIR) and the Mitigation Monitoring and Reporting Program, when implemented, will avoid or substantially lessen virtually all of the significant impacts identified in the Final SEIR for the New Brentwood Center (project). However, under the land use assumptions analyzed in the SEIR with two community colleges in close proximity to one another, certain significant impacts of the project are unavoidable even after incorporation of all feasible mitigation measures. Because the District does not have the authority to change the land use designation on the Cowell Property, this is the only assumption that can be made. As such, the project would result in significant and unavoidable air quality and traffic impacts. The Final SEIR provides detailed information regarding these impacts.

The Final SEIR also analyzed a more realistic Alternative Land Use Designation for the Cowell Property, which would lessen the impacts and avoid the significant and unavoidable impacts. It is reasonable to assume that the California Community Colleges Chancellor’s Office, the California Postsecondary Education Commission, and the City of Brentwood would not support a second community college on the Cowell Property and, therefore, all significant and unavoidable impacts identified in the Final SEIR would not occur.

The District finds that all feasible mitigation measures identified in the Final SEIR within the purview of the District will be implemented with the project, and that the remaining significant and unavoidable impacts are outweighed and are found to be acceptable due to the following specific overriding economic, legal, social, technological and/or other benefits based upon the facts set forth in the Findings of Fact (provided under separate cover), the Final SEIR and the administrative record, as follows:

- The New Brentwood Center will benefit the residents of east Contra Costa County and further the District’s mission of providing accessible, innovative and outstanding higher education opportunities and support services.
- The project will provide sufficient property to develop 88,000 gross square feet of college space. This facility size is projected to be adequate for long-range educational needs in the enrollment area.
- The facility will be in an ideal central location to serve the enrollment area and will have access within one quarter of a mile to the state highway serving that area. The current leased facility is several miles from the highway which decreases its apparent accessibility and convenience for people seeking higher education.
- The project will move the community college from the Cowell Property (the site originally zoned for a community college) to the site studied in the SEIR. Although the District has no authority to
Property still has an approved community college land use. Because the District is not the land use regulatory body with authority over the uses allowed on the Cowell Property (the City is) and the District does not control the Cowell Property, the District cannot legally change the land use designation for the Cowell Property, and hence, the District did not include such a change of use in its project proposal.

As described above, the intersection of the SR 4 Bypass and Marsh Creek Road, however, is expected to operate at an unacceptable level of service (LOS) D during both peak hours under Cumulative No Project conditions. The addition of project traffic would increase the V/C ratio by more than 0.1. This impact is considered potentially significant based on significance criteria used in the Vineyards EIR.

Construction of an overpass at this location is included in the East Contra Costa Regional Fee and Financing Authority (ECCRFFA) Plan. Construction of the SR 4 Bypass/Marsh Creek Road overpass would provide acceptable operations at this location. However, the fee program does not identify funding sources to fully fund all of the projects in the ECCRFFA Plan, including the SR 4 Bypass/Marsh Creek Road overpass. No other feasible mitigation has been identified for this intersection. Thus, the impact is considered significant and unavoidable.

5.0 FINDINGS REGARDING CONSIDERATIONS THAT MAKE ALTERNATIVES ANALYZED IN THE EIR INFEASIBLE

As previously described, the Vineyards EIR was certified by the City in 2004 for the Vineyards Project. The Vineyards EIR analyzed a reasonable range of alternatives to the Vineyards Project, as required by CEQA.

The SEIR further expanded the reasonable range of alternatives in the Vineyards EIR by analyzing an alternative land use for the Cowell Property (presently designated Community College by the City’s General Plan), given that the project proposes to relocate the community college use to a portion of the Pioneer Square site and given that it is not likely that two community college campuses would ever be developed in close proximity to one another.

The alternative was presented in the SEIR to compare the impacts of the proposed project with those that might result if the land use on the Cowell Property were changed by the City in the future. Analysis of this alternative allows the greater community to discern what could take place on the Cowell Property if the City, in concert with the owners of the Cowell Property, later decide to consider alternative uses for the Cowell Property, and how such changed use would potentially avoid or substantially lessen all significant impacts of the project analyzed in the SEIR.

5.1 ALTERNATIVE LAND USE DESIGNATION

Under the proposed project, the New Brentwood Center community college uses and facilities would be relocated from the approximately 29-acre Cowell Property where it was previously proposed to a 17-acre portion of the 27-acre Pioneer Square site. The Cowell Property is currently designated by the City’s General Plan as Community College and the Pioneer Square site is designated Mixed-Use Business Park. Thus, the proposed project would displace approximately 63 percent (17 acres divided by 27 acres) of the mixed-use development that would otherwise be allowed on the Pioneer Square site.

The Alternative Land Use Designation would change the land use on the Cowell Property from Community College to Mixed-Use Business Park and transfer the 63 percent of Mixed-Use Business Park uses otherwise allowed on the 17-acre portion of the Pioneer Square site (and now displaced by the
releasing all legal interest in the Cowell Property as a part of the proposed project. Accordingly, there is no organization in Contra Costa County with the ability to establish a community college campus on the Cowell Property. It is also reasonable to assume that at some point the City will approve a change to the General Plan land use designation on the Cowell Property, or it will remain undeveloped.

6.0 FINDINGS WITH RESPECT TO MITIGATION OF SIGNIFICANT ADVERSE IMPACTS AND ADOPTION OF MITIGATION MONITORING PLAN

Based on the entire record before the District, and having considered the significant and unavoidable impacts of the project, the District hereby determines that all feasible mitigation within the responsibility and jurisdiction of the District has been adopted to reduce or avoid the potentially significant impacts identified in the SEIR, and that no additional feasible mitigation is available to further reduce significant impacts. The feasible mitigation measures are discussed in Sections 4.1 and 4.2, above, and are set forth in the MMRP.

CEQA provides that each public agency mitigate or avoid the significant effects on the environment of projects it approves or carries out whenever it is feasible to do so (Public Resources Code § 21001.1(b)). In mitigating or avoiding a significant effect of a project, a public agency may exercise only those express or implied powers provided by law other than under CEQA (Public Resources Code § 21004). The District has specific powers to mitigate effects that occur within its jurisdiction, namely within the District.

Public Resources Code § 21081.6 requires the District to adopt a monitoring or compliance program regarding the changes in the project and mitigation measures imposed to lessen or avoid significant effects on the environment. The MMRP for the New Brentwood Center project is hereby adopted by the District because it fulfills the CEQA mitigation monitoring requirements, as follows:

- The MMRP is designed to ensure compliance with the changes in the project and mitigation measures imposed on the project during project implementation
- Measures to mitigate or avoid significant effects on the environment are fully enforceable through conditions of approval, permit conditions, agreements or other measures

change the land use designation on the Cowell Property, it is reasonable to assume that a community college will not be built there. The Contra Costa Community College District is the only community college district recognized by the Board of Governors of the California Community Colleges in Contra Costa County with jurisdiction to establish a community college campus in this area of the County, and the District is releasing all legal interest in the Cowell Property as a part of the project. Accordingly, there is no organization in Contra Costa County with the ability to establish a community college campus on the Cowell Property. It is also reasonable to assume that at some point the City will approve a change to the General Plan land use designation on the Cowell Property, or it will remain undeveloped.

- The District will own the facility. This will end ongoing rental expense and provide greater control to modify the facility as educational needs change with the passage of time.

- Ownership of the facility will provide one of the remaining elements necessary to qualify for recognition as a formal Education Center. The state wants to ensure that its investment in a formal Education Center is permanently secure.

construction surveys, it will be relocated as necessary to a location in Marsh Creek deemed suitable by the biologist (i.e., at a location in Marsh Creek which is a sufficient distance from construction activities). Because attempting to locate pond turtle nests will not result in a realistic probability of detection, if a western pond turtle is found in Marsh Creek adjacent to the site, exclusion fencing will be used to eliminate the possibility of nest establishment in uplands adjacent to that portion of Marsh Creek. This measure may be required for other species (see mitigation for California red-legged frog).

3.8-F.2 - A qualified biologist will provide project contractors and construction crews with a worker-awareness program before any work within Marsh Creek or adjacent upland habitats that are appropriate for western pond turtles. This program will be used to describe the species, its habits and habitats, its legal status and required protection, and all applicable mitigation measures.

3.8-G.1 - Demolition and construction should be scheduled, to the extent feasible, to avoid the nesting season, which extends from February through August. If it is not possible to schedule demolition and construction between September and January, then one of the following options (Mitigation 3.8-G.2 or 3.8-G.3) shall be implemented.

If construction is to occur during the breeding season (February – August), pre-construction surveys in habitats appropriate for the Loggerhead Shrike, California Horned Lark, and California Yellow Warbler should be conducted by a qualified biologist no more than 15 days prior to the initiation of construction in any given area. Pre-construction surveys should be used to ensure that no nests will be disturbed during project implementation. If nests are found during these surveys, the preferred mitigation will be to determine whether the nest will become complete before the onset of construction activities. In this event, the nest will be allowed to remain undisturbed. Alternatively, if the status of the nest at the time of detection, coupled with the species’ specific egg-laying, incubation, and chick-rearing interval indicates that the nest will not be completed prior to the onset of otherwise approved construction, arrangements will be made to transport the nest to a CDFG-approved wildlife rehabilitation facility. The nest will be protected by a construction and disturbance-free buffer of sufficient size until the eggs hatch. Following hatch and a sufficient interval for any chicks to become capable of self-thermoregulation, the entire nest and contents will be transported to the approved facility for rearing.

<tr>
<td>3.8-K.2 - If active maternity roosts or hibernacula are found in trees which will be removed as part of project construction, demolition of that tree should commence before maternity colonies form (i.e., prior to March 1) or after young are volant (flying) (i.e., after July 31). Disturbance-free buffer zones as determined by a qualified bat biologist should be observed during the maternity roost season (March 1 - July 31). If a non-breeding bat hibernacula is found in a tree scheduled to be removed, the individuals should be safely evicted, under the direction of a qualified bat biologist (as determined by a Memorandum of Understanding with CDFG), by opening the roosting area to allow airflow through the cavity. Demolition</td>
<td>If active maternity roosts or hibernacula are found, implement the measures listed in Mitigation Measure 3.8-K.2</td>
<td>Contra Costa Community College District and construction contractor</td>
<td>Prior to the start of demolition, implement the measures listed in Mitigation Measure 3.8-K.2</td>
<td>Postpone the start of demolition until measures have been implemented</td>
<td></td>
</tr>
</tbody>
</table>
should then follow at least one night after initial disturbance for airflow. This action should allow bats to leave during darkness, thus increasing their chance of finding new roosts with a minimum of potential predation during daylight.

Trees with roosts that need to be removed should first be disturbed at dusk, just prior to removal that same evening, to allow bats to escape during the darker hours.

Mitigation 3.8-M - The following mitigation measures would result in less than significant impacts to the potential loss of individual kit foxes during Vineyards project construction:

- Pre-construction surveys shall be conducted no less than 14 days and no more than 30 days prior to the beginning of ground disturbance and/or construction activities for any project activity likely to impact the San Joaquin kit fox. If construction is phased, pre-construction surveys shall be conducted for each phase according to the timing and schedule stated above.

- An employee education program shall be conducted. A qualified biologist will provide project contractors and construction crews with a worker-awareness program before any grading or construction work occurs on the

Vineyards project site. This program will be used to describe the species, its habits and habitats, its legal status and required protection, and all applicable mitigation measures.

- Project-related vehicles shall observe a 20-mph speed limit in the project area, except on county roads and State and Federal highways; this is particularly important at night when kit foxes are most active.
- To the extent practicable, nighttime construction shall be minimized.
- Off-road traffic outside of designated project areas shall be prohibited.
- To prevent inadvertent entrapment of kit foxes or other animals during the construction phases of the projects, all excavated, steep-walled holes or trenches more than two feet deep shall be covered at the close of each working day by plywood or similar materials or equipped with one or more escape ramps constructed of earth fill or wooden planks. Before such holes or trenches are filled, they shall be thoroughly inspected for trapped animals.
- All construction pipes, culverts, or similar structures with a diameter of four inches or greater that are stored at a construction site for one or more months, shall be thoroughly inspected for trapped animals.

<td>3.12-A - Prior to the construction of the Village Center area, the proposed Marsh Creek Trail Segment, and other improvements and construction activities within the southeastern section of the Vineyards site, a program to mitigate impacts to CCO-548 shall be developed and implemented. The mitigation program shall include (but not be limited to) the following actions:</td>
<td>Implement APTP prepared by Holman &amp; Associates for Vineyards Project and comply with the actions listed in Mitigation Measure 3.12-A</td>
<td>Contra Costa Community College District and construction contractor</td>
<td>During grading and construction, implement APTP and comply with the actions listed in Mitigation Measure 3.12-A</td>
<td>Halt grading and construction until the actions have been implemented</td>
<td></td>
</tr>
</tbody>
</table>

- **Avoidance:** Consultation with a qualified archaeologist during design of projects in the vicinity of CCO-548. To the extent feasible, construction activity shall avoid resources within CCO-548.

- **Controlled Data Recovery:** If avoidance of resources in CCO-548 is not feasible, a qualified archaeologist shall conduct controlled data recovery of resources. Resources shall be cataloged and analyzed and a final report of findings of mitigation data shall be submitted to the Northwest Information Center to demonstrate that mitigation has been completed. To the extent required by law, culturally affiliated Native Americans shall be consulted during “controlled data recovery,” if resources in CCO-548 cannot be avoided. The disposition of non-burial artifacts shall be...
determined in consultation with the culturally affiliated Native Americans.

- Archaeological Monitoring/Recordation/Removal: A qualified archaeologist shall monitor all construction related grading and earthmoving activities in the southeastern portion of the Vineyards site. If cultural resources are encountered during construction, all work within the vicinity of the find shall stop immediately. The cultural resource shall be identified, recorded, and/or removed by a qualified archaeologist before grading and trenching activities can recommence in the area of discovery. To the extent required by law, culturally affiliated Native Americans shall be consulted during “archaeological monitoring/recordation/removal,” if such activities are required.

- If any human remains are discovered, all work within the vicinity of the discovery shall stop immediately and the County Coroner will be notified. If the coroner determines the remains to be of Native American origin, he or she shall notify the Native American Heritage Commission (NAHC). The NAHC shall then identify the most likely descendant(s) (MLD) to be consulted regarding treatment and/or reburial of the remains (Section 5097.98 of the Public

Resources Code). If an MLD cannot be identified, or the MLD fails to make a recommendation regarding the treatment of the remains within 48 hours after gaining access to the remains, the Native American human remains and associated grave goods shall be reburied with appropriate dignity on the property in a location not subject to further subsurface disturbance. Work can continue once the MLD’s recommendations have been implemented or the remains have been reburied if no agreement can be reached with the MLD (Section 5097.98 of the Public Resources Code).

- Human remains that are encountered shall be sensitively treated under the professional guidance of a qualified archaeologist. Any human remains that are identified in areas that will be impacted by construction activities shall be exposed utilizing standard archaeological procedures. All skeletal material and associated grave goods shall be carefully removed for reburial in an area as close to their original location as possible. This area shall be protected from future disturbance. Burial inventories shall be completed and made available for inspection at the completion of burial removal.

- Measures to address the treatment of

| 3.9-C - Prior to issuance of grading permits a qualified engineering geologist shall be retained to prepare a detailed geotechnical engineering design study for proposed building sites. Any recommended design and engineering solutions to ensure sufficient foundation stability shall be incorporated into the project's design plans. Prior to the issuance of the first building permit, the State Architect shall verify that the project conforms to the seismic requirements stipulated in the Uniform Building Code (UBC) for Seismic Zone 4, the zone of highest seismic risk. | Prepare a detailed geotechnical study | Contra Costa Community College District | Prior to the start of grading, review detailed geotechnical study and ensure that recommendations are incorporated in project plans | Postpone grading until study has been completed and recommendations have been incorporated in plans |

| 3.9-K - As required by the UBC, site-specific detailed design studies shall be prepared by a licensed engineering geologist and reviewed by the State Architect prior to the issuance of grading permits for any development on the Vineyards at Marsh Creek project site. The evaluation of expansive soils and the formulation and implementation of design criteria for foundation and pavement design in expansive soils shall be addressed. Such recommendations of | Prepare study that evaluates expansive soils that includes one or more of the design criteria listed in Mitigation Measure 3.9-K | Contra Costa Community College District | Prior to the start of grading, review evaluation to ensure that the criteria listed in Mitigation Measure 3.9-K are included and incorporated in project plans | Postpone the start of grading until evaluation has been completed and recommendations have been incorporated in plans |
Contra Costa Community College District

Minimize the use of expansive soil as fill within upper portions of building pads.

Compact expansive soil fill wetter than optimum moisture content.

Extend shallow foundations below the zone of seasonal moisture fluctuations.

Use deep foundations such as drilled piers, or stiff grid or mat foundations that can move without cracking, in areas of expansive soil or rock.

Control site drainage to minimize seasonal wetting and drying of expansive materials.

Provide non-expansive fill layers under foundations, slabs, and pavements.

Treat expansive soils with lime or cement in the area of improvements to reduce the effects of expansive materials.

All recommendations of the engineering geologist shall be incorporated in the proposed construction plan, prior to approval of the grading permit. The engineering geologist services shall be retained throughout site grading and s/he shall be contacted prior to grading and when onsite conditions necessitate deviations from the approved plan.
