# Introduction

## Project Overview

The COVID-19 pandemic has brought significant changes in the manner of how students can access educational resources due to safety concerns of in-person meetings over the course of the 2020-21 and 2021-22 academic years. Since spring 2021 students have been limited to primarily accessing educational resources through an online format.

Surveys conducted in the early onset of the pandemic (spring 2020) throughout the state in April and May of 2020 revealed that students were hesitant to return to their educational pursuits in the fall of 2020 and expressed a strong preference for face to face, in-person, learning. The strong in-person preference may have contributed to the resulting significant decrease in post-secondary education enrollment state wide. Contra Costa Community College District conducted a follow up survey in April 2021, a year later, to gage students' preferences for course modality for the fall of 2021. That study revealed a strong preference for the continuation of online course delivery methods and online student services access.

In effort to continue engaging the 4CD student population, a second follow up survey was developed and distributed among students during the fall 2021 term. This survey focused on student intention to enroll for spring 2022, gage student preferences for course delivery, and to determine if new vaccine mandates have a bearing on the student's choices for course enrollment and preferred course modality. The results are discussed in the following sections.

## Methodology

### Process

The data presented in this report is primarily based on information obtained from a survey distributed to enrolled students during the fall 2021 term and students who applied for new enrollment in the spring 2021 term. The survey was developed through multiple meetings between the Research and Planning District Office and the local college Deans of Institutional Effectiveness and Student Success. The college deans collected suggested questions and survey logic recommendations from their local constituent groups and committees which informed the final survey distributed.

The survey was initially distributed through the communication platform to students via email, text, and Insite notifications on September 28, 2021. The survey was open for response collection from September 28 to October 12<sup>th</sup>, 2021. The colleges also participated in the amplification of the survey distribution by including notices to faculty, academic deans, and in some cases through local newsletters to assist in collection efforts.

The survey consisted of eighteen (18) questions in total with skip logic employed two specific questions, these are noted in the results discussion. The survey consisted of five (5) questions that gathered

## Contra Costa Community College District Student Survey for Spring 2022 Course and Services Preference

demographic information and information about the primary college/campus the student attends, two (2) questions relating to COVID-19 vaccination status and vaccine mandates, six (6) questions sought to elicit responses from students about their general preference for the learning modality, three (3) questions related to student services access and needs, and two open ended questions for student engagement improvements and future enrollment engagement.

## Analysis of the Results

The results of the survey are briefly discussed in the Overview section. The results are organized by survey question order in the following dashboard tabs. Results can be viewed at the District aggregated level and down to the campus location level. By default each graph is already expanded to the college level, end users can aggregate by clicking on the (-) sign over the “District” header in each graph, or expand into the campus locations by clicking on the (+) sign over the “College” header in each graph. Additionally, on many of the question tabs end users have the ability to filter results by respondent demographics (age, ethnicity, gender).

[https://tableau1.4cd.edu/views/StudentEnrollmentIntentandPreferencesSP2022/SurveyDemographics?:showAppBanner=false&:display\\_count=n&:showVizHome=n&:origin=viz\\_share\\_link](https://tableau1.4cd.edu/views/StudentEnrollmentIntentandPreferencesSP2022/SurveyDemographics?:showAppBanner=false&:display_count=n&:showVizHome=n&:origin=viz_share_link)<sup>1</sup>

Results are also provided in the sections below as appendixes, organized by district and colleges.

## Executive Summary

The response rate of students to the survey is a representative sample, with 95% confidence level and +/- <2% margin of error<sup>2</sup>. The survey collected 5,170 responses and were significantly uniform confirming the survey results reached an appropriate level of saturation. The respondent demographics are well aligned with the overall student population.

Generally, responses came from a traditional college age group of 18-24, 61%. Females are slightly over represented in the participant population, however, it is within a reasonable range for the overall student population. Ethnicity representation in the sample population is aligned with the overall student population, the sample is stratified across all groups based on ethnic/race representation at the district level<sup>3</sup>.

Students were asked a series of questions related to vaccines and vaccine mandates. Students were asked to voluntarily report their vaccination status; question 6. A significant majority of students indicated they were already fully vaccinated (~84%; 4,334), an additional 300 students (~6%) indicated they planned to be fully vaccinated by November 1: 2021.

<sup>3</sup> <https://www.4cd.edu/about/docs/Fingertip%20Facts.pdf>

Contra Costa Community College District  
Student Survey for Spring 2022 Course and Services Preference

Overwhelmingly students responded they intend to enroll for the spring 2022 academic term (92%). Where students responded they did not intend to enroll or have not decided if they will enroll (385, ~8%), skip logic was employed and these students were asked an additional two questions only. First question asked if their indecision or intent to not enroll was related to the district's vaccine mandate<sup>4</sup>. Students that did not plan or were unsure if they were going to enroll in spring 2022 (387); ~80% indicated that it was **not** due to the vaccine mandate. The additional second question was an open ended question, "What can we do to help you to choose to enroll"; responses for this question have been sent to the local deans for follow up and further analysis.

Students that indicated that they planned to enroll were asked additional questions about their preferred method of instruction. These questions were divided into two specific areas; course activity and course disciplines. Half of the students reported plans to only enroll in online courses. Survey skip logic was also employed with the question about online only preference, respondents that indicated they intended to only enroll in online courses were asked if this was due to a vaccine mandate; 78% indicated it was **not** due the mandate.

Participants were asked about preferred method of instruction based on course activity; lecture and lab/studio. When participants were asked to for their preference of online method of instruction, the highest ranked or most preferred method was online asynchronous (classes that are fully online that have no scheduled meeting time) for both lab/studio and lecture activities. Second most preferred method of course delivery for lab/studio activities was in person (26%), hybrid was 24% and least preferred were synchronous online (18%). Considering lecture course activities second most preferred was synchronous online (~27%), followed by ~16-17% for both hybrid or in person only.

This general range of preferences followed through when students were asked preferences for specific course disciplines. Courses associated with lab/studio components (science, math, studio arts) most preferred was asynchronous (30-41%); only in person (25-26%), synchronous (15-28%) and hybrid 14-21%). Course subjects mostly associated with lecture based activities (humanities, communication, language arts, business, information technology, computer science, and social/behavioral science) most preferred was asynchronous (44-49%); synchronous (21-23%), in person (15-19%), and hybrid 13-16%).

This survey confirms that a shift in student preferences has occurred over the last year and half, since the first survey conducted in April 2020. In the first survey year (2020) students expressed a strong preference for in-person learning and services, very different from the results obtained through this survey and the previous done in April 2021. This suggests that students have

- a. Students overall successfully transitioned to online learning, and/or

---

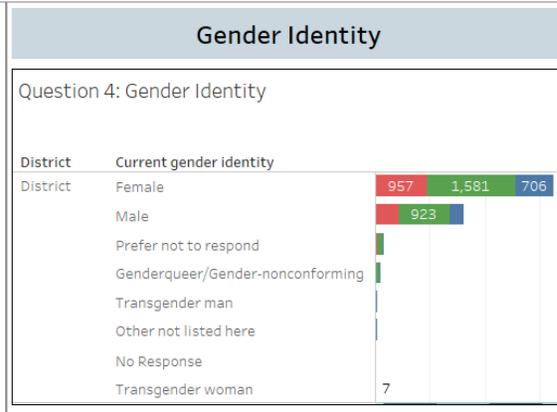

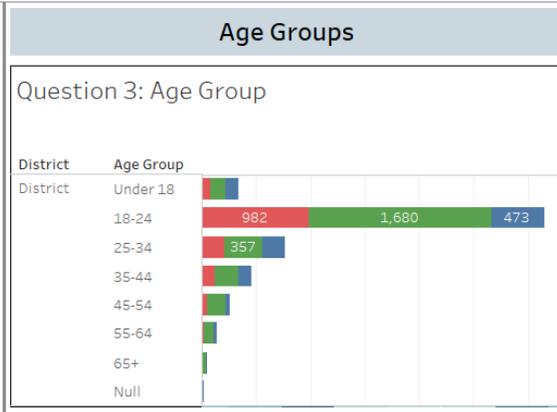

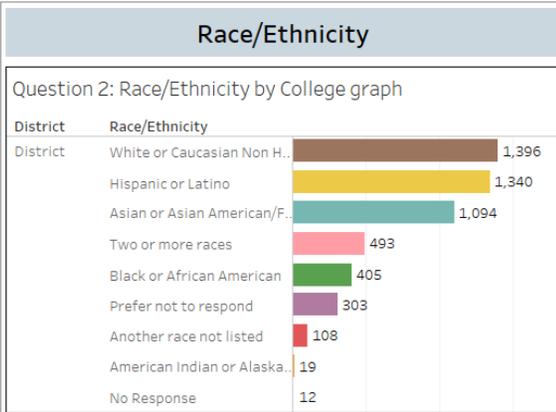

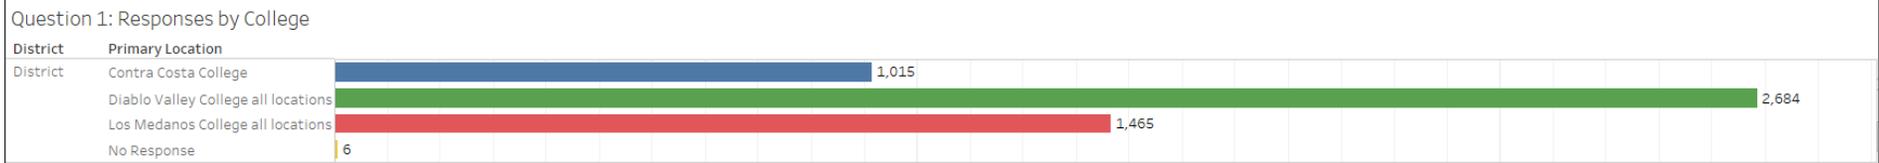

<sup>4</sup> Early in the dissemination of the survey there was an error in the skip logic, all respondents during the first 3 hours after the survey was released were presented the question "You indicated you were not sure or not planning to enroll, is this due to vaccine requirement?" to more accurately represent the ratio the n from question eight is divided by total "yes" responses for question 17.

Contra Costa Community College District  
Student Survey for Spring 2022 Course and Services Preference

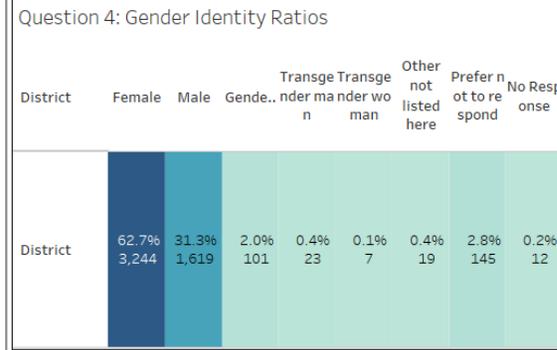

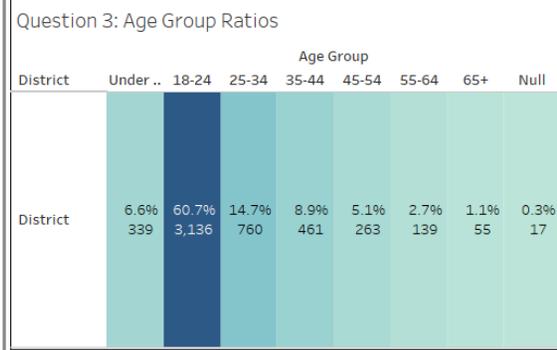

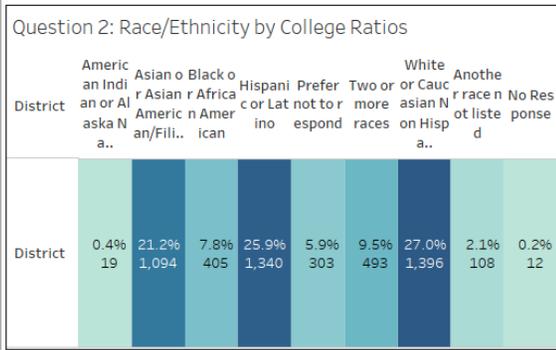

- b. The student population being served has changed, from a population uncomfortable with distance education based learning to a population that has embraced online course formats, and/or
- c. Survey was distributed through online communication, this may skew participation to students that are highly responsive to that mode of communication; however, this survey was shared locally and with college constituent groups in an attempt to overcome that bias and/or
- d. The student population has been positively impacted by the faculty and college investments in learning, developing, and implementing the transition to online instruction and support services, resulting in students increased comfort and preference for online environments.
