Executive Summary

Purpose of the Engagement

Contra Costa Community College District (District) engaged WTC Consulting, Inc. (WTC) to assist the District with identifying communications needs and developing a District-Wide Strategic Infrastructure / Telecommunications Plan for data, voice, and video communications.

Engagement Approach

WTC completed the following steps:

Step 1: Worked with the two teams, Working / Steering Group and Policy Group, to identify four major strategic business issues:

- What to do with the technology infrastructure?
- What level of redundancy and survivability is needed by the District?
- What should be the rate of adoption for Voice over IP?
- What to do with the current outdated telephone system?

Step 2: Worked with the Working Group to define 10 configuration alternatives for voice, data, wireless, and Wide Area Network (WAN) architectures.

Step 3: Prepared a Port Model™ to represent sizing requirements and growth through the year 2015.

Step 4: Conducted a physical survey of all 174 telecommunication rooms (TRs).

Step 5: Analyzed the existing voice, data, wireless, and WAN environments.

Steps 6 and 7: Prepared capital and life-cycle budget estimates.

Steps 8 and 9: Developed a recommendation and held meetings with District Cabinet to gain their guidance.

Step 10: Created a Strategic Plan and a 7-year Timing of Funds model.

Key Findings and Conclusions

Following are key findings and conclusions:

- For voice and data architecture, capital budget estimates ranged from \$8.87 - \$13.04 million and life-cycle budget estimates ranged from \$16.97 - \$25.86 million.
- Migrating to a common cable plant, a VoIP-equipped voice system, and upgrading the existing LAN is the most practical next step. This allows for migration to VoIP and is the most appropriate strategic direction for the voice and data architecture. The capital cost estimate is \$12.82 million and the life-cycle cost over seven years is \$25.84 million.
- Increasing the redundancy and survivability of the voice, data, and WAN architecture will benefit the District with more resiliency, unified management, smooth deployment of new services, and the addition of high bandwidth applications.

Recommendations and Next Steps

Following are recommendations and next steps:

- Determine the changes needed for unified management of the voice, data, and WAN services.
- Determine the procedures needed to manage the ongoing support of the networks.
- Develop District-wide policies and standards for wired and wireless LAN Ethernet infrastructure management and WAN access.
- Conduct an RFP process for a voice system using Configuration X and include purchasing agreements for LAN and WAN systems.
- Prioritize upgrades of the physical infrastructure and develop a four-year upgrade plan.
- Conduct an analysis of the District's cost and funding processes in light of the District's strategic technology directions.

1 Purpose of the Engagement

Contra Costa Community College District (District) engaged WTC Consulting, Inc. (WTC) to assist the District with identifying future communications requirements based on business needs and developing a District-wide Strategic Infrastructure / Telecommunications Plan for providing data, voice, and video communications to support future business needs.

2 Engagement Approach

The following sections outline the key steps in the approach taken to complete this engagement.

2.1 Step 1: Established Engagement Teams

The following two teams were established to provide guidance and assistance throughout the strategic planning process.

- *Working / Steering Group:* The role of this Group was to develop a working understanding of the scope and intent of the engagement and to provide necessary input at key points during the strategic planning process. The Steering group members also provided consistency regarding policy decisions and operational preferences, tested the impact of new policy directions, and assessed risk.
- *Policy Group:* The role of this Group was to provide leadership and direction on business objectives and priorities during the engagement.

The list of members for each of these teams appears in the Planning Assumptions document located in Attachment I.

2.2 Step 2: Developed Planning Assumptions

WTC worked with the engagement teams to develop a Planning Assumptions document. This document formalized the understanding of the engagement scope, provided consensus regarding the specific issues pertaining to the engagement, and served as a guide during the engagement process. A final version of the Planning Assumptions document accompanies this report in Attachment I.

In the following sections, we detail the key assumptions and constructs

developed during the planning assumptions process.

2.2.1 *Basic Assumptions:* The following are basic assumptions underlying the strategic planning alternatives considered during the engagement:

- The planning horizon is now through the year 2015.
- The strategic plan developed would be practical.
- Alternatives would address both choices and the consequences of these choices.
- Examination of alternatives would include all significant District facilities, both existing and planned.
- Communications infrastructure would encompass the telephone system, the local area wired and wireless networks, the District wide-area network, and include both physical infrastructure and systems.

2.2.2 *Strategic Business Issues:* The following strategic issues were identified by the engagement teams as key drivers for the alternatives to be modeled.

- *Convergence:* Should the District migrate to a common cable plant for its voice and data networks or continue to maintain separate networks?
- *Rate of Technology Adoption:* How quickly should the District move toward adopting Voice over Internet Protocol (VoIP) technology?
- *Strategies for the Survivability:* Should the District develop a more survivable voice and data network or continue with the current survivability level?

2.2.3 *Configuration Alternatives:* The configuration alternatives developed addressed three physical infrastructure treatments and five voice system alternatives. Table I illustrates the voice and data configuration alternatives that were modeled in this strategic planning effort.

Table I Configuration Alternatives					
Infrastructure	Combined Infrastructure: Prepare Common Cable Plant However, Do Not Deploy VoIP	Combined Infrastructure: Common Cable Plant for the Voice and Data Networks Using Partial Converged VoIP		Combined Infrastructure: Common Cable Plant for the Voice and Data Networks Using Converged VoIP	
Description	Upgrade LAN (No POE) Existing Mitel 100% Digital Phones 0% VoIP phones Convenience Wireless Video = IPTV	Upgrade LAN (100% POE) Upgraded Mitel 50% Digital Phones 50% VoIP phones Convenience Wireless Video = IPTV	Upgrade LAN (100% POE) New Hybrid IPPBX 50% Digital Phones 50% VoIP phones Convenience Wireless Video = IPTV	Upgrade LAN (100% POE) Upgraded Mitel 0% Digital Phones 100% VoIP phones Convenience Wireless Video = IPTV	Upgrade LAN (100% POE) New IPPBX or Network-Based VoIP 0% Digital Phones 100% VoIP phones Convenience Wireless Video = IPTV
Current Survivability	I	II	III	IV	V
More Survivability	VI	VII	VIII	IX	X

2.3 Step 3: Developed the Strategic Sizing Forecast

2.3.1 WTC prepared a sizing document referred to as a Port Model™. This model represents the sizing and general interface requirements of the District's physical infrastructure and its voice, data, and wireless networks. This model also identifies potential growth through the year 2015.

2.3.2 The Port Model reflected the different ways in which voice and data ports and devices are handled in each of the ten configuration alternatives. Three separate Port Models were developed to accommodate these variances.

2.3.3 The Port Model reflected the anticipated growth in voice and data ports during the planning horizon. The Working Group assigned voice and data growth treatments to each District building of low, medium, or high. Tables II and III show the treatment for each of

these growth types. Growth percentages are not cumulative; all percentages are applied to the 2008 data received from the District.

Table II Growth Treatment for Data Network					
		<i>Working @ Cut</i>	<i>Equipped</i>	<i>Wired</i>	<i>Capacity</i>
<i>Growth Type</i>	<i>2008</i>	<i>At Year 1 2009</i>	<i>At Year 2 2010</i>	<i>At Year 4 2012</i>	<i>At Year 7 2015</i>
Low	Data from District	1%	3%	10%	20%
Medium	Data from District	2%	10%	30%	60%
High	Data from District	4%	20%	50%	100%

Table III Growth Treatment for Voice Network					
		<i>Working @ Cut</i>	<i>Equipped</i>	<i>Wired</i>	<i>Capacity</i>
<i>Growth Type</i>	<i>2008</i>	<i>At Year 1 2009</i>	<i>At Year 2 2010</i>	<i>At Year 4 2012</i>	<i>At Year 7 2015</i>
Low	Data from District	0%	1%	2%	5%
Medium	Data from District	1%	2%	5%	10%
High	Data from District	1%	3%	10%	20%

2.3.4 The Port Model was generated on August 29, 2008, and delivered to the District on September 4, 2008.

2.4 Step 4: Conducted a Physical Infrastructure Survey

2.4.1 WTC conducted a physical survey of 174 telecommunication rooms (TRs) in 105 District buildings.

2.4.2 The survey process included examination of 120 TR survey elements including space, environmental, equipment, copper cable, fiber optic cable, and code and safety issues. The process also included taking photos of each TR surveyed to document the conditions of the TR.

2.4.3 The survey process examined each of the TRs for both maintaining separate cable plants for voice and data (non-combined) and migrating to a common cable plant for voice and data (combined).

2.4.4 The survey process included examination of typical cost factors such

as size and location of TR, recabling requirements, difficulty of horizontal recabling, air conditioning, electrical, and storage removal needed.

2.4.5 WTC generated a TR Profile Book detailing the conditions of the TRs surveyed as well as the budgets required for upgrades. The TR Profile Book was delivered to the District on September 4, 2008.

2.5 Step 5: Evaluated Existing Technology Environment

The Working Group reviewed the existing voice and data environments:

2.5.1 Data Networks

Reviewed the core data site at the District Office along with backup procedures and connectivity to each campus.

2.5.2 Wireless Networks

Prepared a wireless database including existing wireless access point information from each campus and matched the information with the TR survey analysis.

2.5.3 Voice Networks

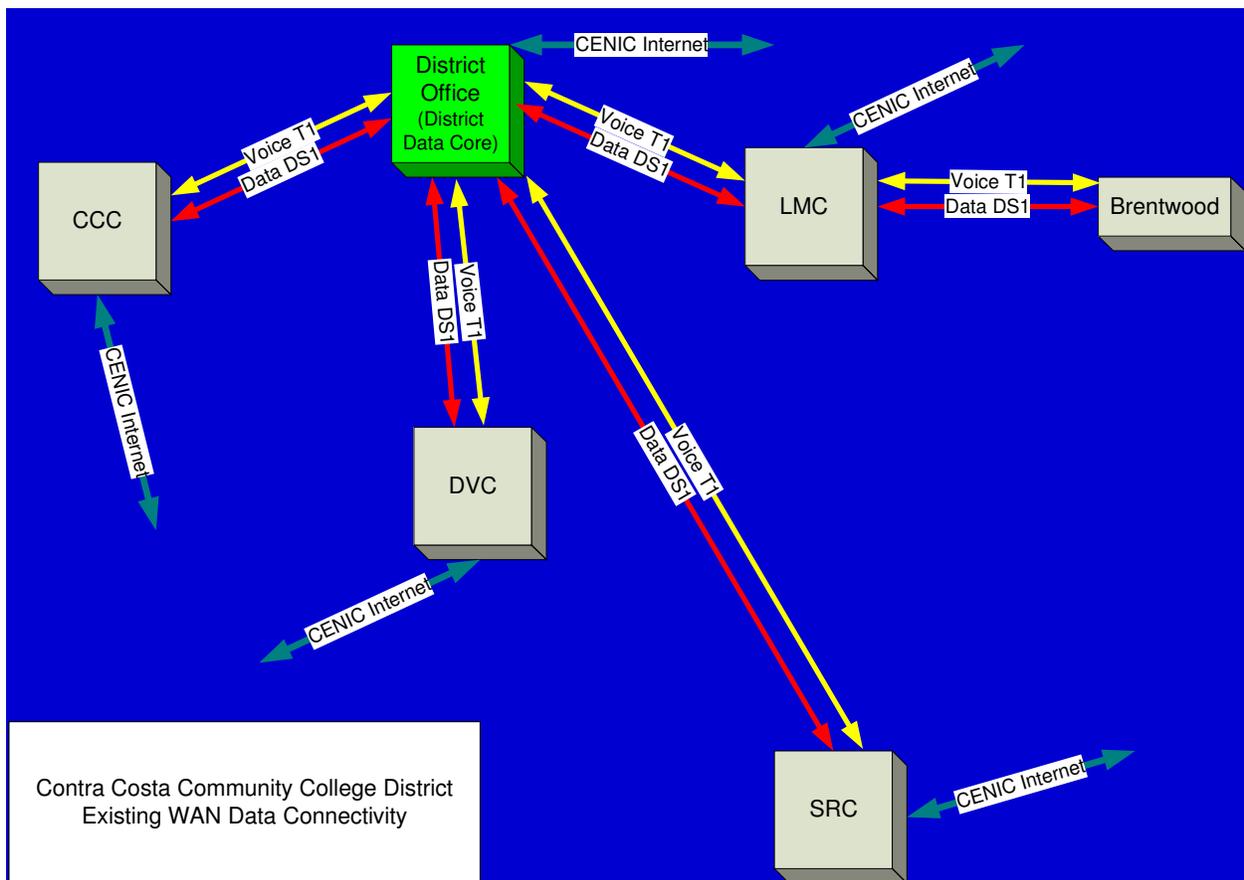

Reviewed the Mitel system configurations for each of the 6 Mitel systems throughout the District. Conferred with the Mitel engineering staff at Mitel Direct regarding possible upgrades to the existing systems and the ability of the systems to support new technologies such as VoIP.

2.5.4 Wide Area Networks

Determined the existing wide area network (WAN) configuration throughout the District. Conferred with AT&T regarding the possible upgrades to the WAN that would allow for a more survivable infrastructure. The existing WAN connectivity is shown in Exhibit I.

Exhibit I
Existing WAN Connectivity

2.6 Step 6: Prepared Capital Budgets

2.6.1 WTC prepared capital budget estimates for the 1) infrastructure, 2) voice and data, 3) wireless LAN, and 4) WAN configuration alternatives.

2.6.2 The capital budgets for the voice and data configuration alternatives include the following elements:

2.6.2.1 *Inside Plant Infrastructure:* 1) TR upgrades, 2) remodeling and rebuilding TRs, 3) re-cabling and reinstalling cable, 4) HVAC and electrical, 5) removal of storage from TRs, 6) inside cable plant upgrades, 7) additional riser cable, 8) additional horizontal cable, and 9) design and implementation costs.

2.6.2.2 *Outside Plant Infrastructure:* 1) Additional single mode fiber and copper for campus buildings and 2) additional WAN connectivity to campuses for more survivability.

2.6.2.3 *Voice System:* 1) Base system, 2) hardware and software, 3) licensing, 4) design and engineering, 5) implementation and project management, 6) on-site training and implementation help desk, 7) removal of existing system, and 8) end-user telephone devices.

2.6.2.4 *Voice Adjunct Systems:* 1) Voice mail w/Unified Communications, 2) E-911 System, 3) ACD/Call Center, and 4) Tele-management System.

2.6.2.5 *Data Network:* 1) LAN electronics, 2) network design and engineering, 3) removal of existing electronics, and 4) switch configuration and installation.

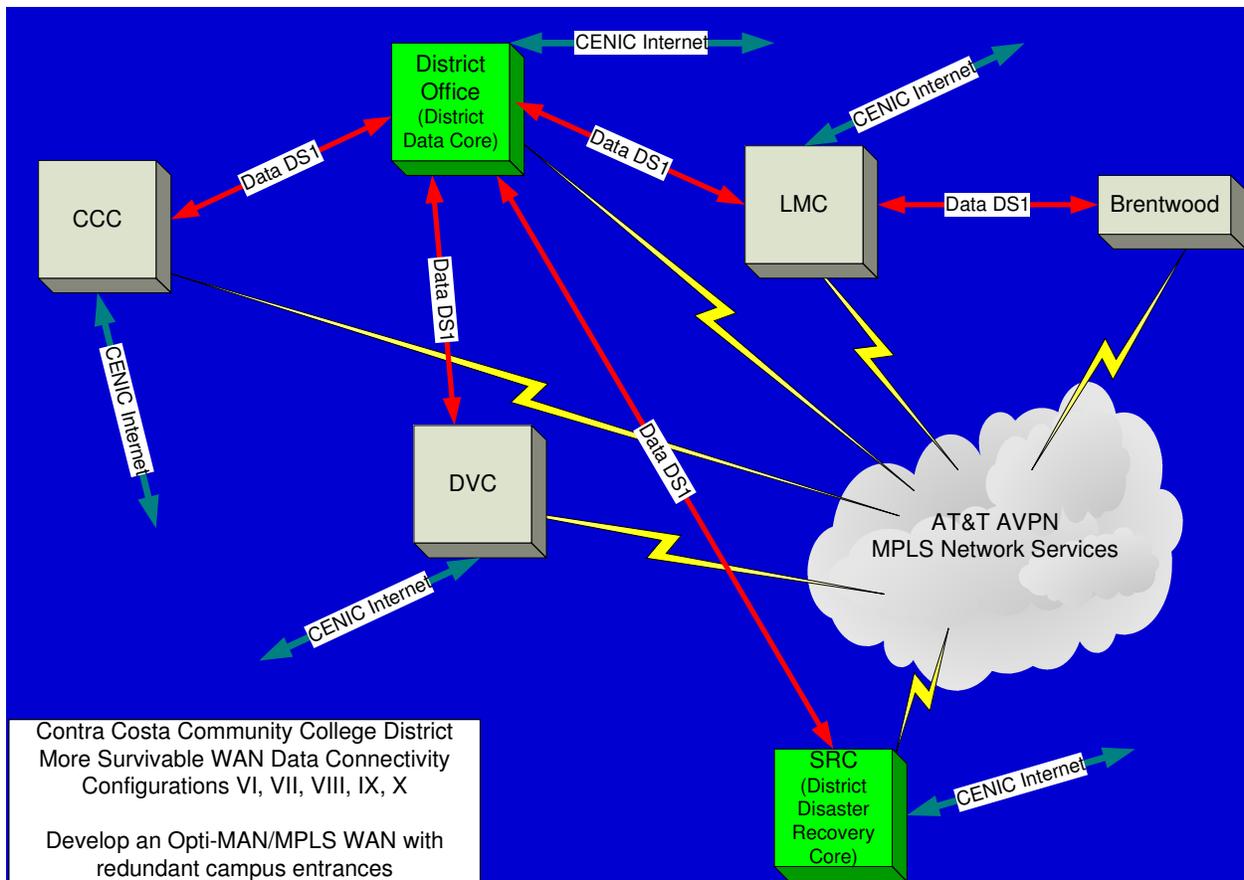

2.6.2.6 *Data Network Adjunct Systems:* 1) Network management, 2) identity management system, 3) firewall and intrusion prevention/detection systems, and 4) Virtual Private Network (VPN) system.

2.6.2.7 *Wireless Data Network System:* 1) 802.11x wireless system survey for each campus and 2) inside and outside wireless access points, wireless management system.

2.6.2.8 **Wide Area Network System:** 1) AT&T AVPN MPLS Ethernet connectivity to each campus capable of 10Mbps transmission speeds, 2) redundant campus entrances for main campuses, 3) non-recurring connection charges, 4) non-recurring management charges, and 5) router equipment. The more survivable WAN connectivity used in Configurations VI through X is shown in Exhibit II.

Exhibit II
More Survivable WAN Connectivity

2.6.2.9 *Implementation for Voice, Data, and Wireless:* 1) Contingency (10.00%), 2) overhead (4.00%), 3) implementation oversight services (5.00%), 4) RFP or Bid process (5.00%), and 5) Final Design and Master Purchase Agreement Negotiations Process (3.00%).

2.6.2.10 *Implementation for Inside and Outside Plant Infrastructure:* 1) Contingency (10.00%), 2) overhead (4.00%), 3) engineering and drawings (6.00%), 4) implementation oversight services (5.00%), 5) RFP or Bid process (5.00%), and 6) Final Design and Master Purchase Agreement Negotiations Process (3.00%).

2.6.2.11 Capital cost model details are included in the following attachments:

- Attachment II, Infrastructure Capital Costs
- Attachment III, Voice Network Capital Costs
- Attachment IV, Data Network Capital Costs
- Attachment V, Wireless LAN Costs
- Attachment VI, Wide Area Network Costs
- Attachment VII, Summary of Capital Costs

2.7 Step 7: Prepared Life-Cycle Budgets

2.7.1 WTC prepared life-cycle budget estimates for the ten voice and data configuration alternatives.

2.7.2 The life-cycle budgets for the voice and data configuration alternatives include the following elements:

2.7.2.1 *Voice System:* 1) Capital costs including refresh costs, 2) growth including planned capital, and 3) recurring charges for operations and maintenance.

2.7.2.2 *Data Network:* 1) Capital costs including refresh costs, 2) growth including planned capital, and 3) recurring charges for operations and maintenance.

2.7.2.3 *Wireless Network:* 1) Capital costs including refresh costs, 2) growth including planned capital growth, and 3) recurring charges for maintenance.

2.7.2.4 *WAN Network:* 1) Capital costs including router equipment refresh costs, 2) growth including planned capital, 3) access charges, 4) bandwidth charges, 5) mileage rate, and 6) managed services.

2.7.2.5 Capital cost model details are included in Attachment VIII, 10-Year Life-Cycle Costs.

2.7.3 The hardware and software refreshment cycles shown in Table IV were used for the life-cycle budgets:

Table IV Hardware and Software Refresh Cycles	
<i>Category</i>	<i>Number of Years</i>
Voice System Hardware and Software	7
Voice Adjunct Systems	5
Data Network Core and Distribution Electronics	5
Data Network Edge Electronics	5
WAN Routers	5
Data Un-interruptible Power Supply Systems	4
Wireless Controllers	4

2.8 Step 8: Recommended a Strategy

Based on business considerations and the results of the analysis of capital and life-cycle costs, WTC made recommendations to the District on the voice and data architecture.

2.9 Step 9: Reviewed Final Results with the District Cabinet

Capital, life-cycle costs, and recommendations were reviewed with the District Cabinet. The Cabinet responded with directives for the Working Group to do more research in certain areas of technology and District finance issues.

2.10 Step 10: Created a Strategic Plan

Based on the engagement teams' endorsement of the recommended strategy, WTC developed a roadmap for the planning horizon together with a

*Contra Costa Community College District
District-Wide Strategic Infrastructure / Telecommunications Plan
Final Report*

timing of funds model.

Timing of Funds model details are included in Attachment IX, Timing of Funds Model.

3 Findings and Conclusions

In this section, we detail our findings and conclusions for the engagement. We have organized the findings and conclusions into the following strategic planning categories: 1) Physical Infrastructure, 2) Projected System Growth, 3) Voice and Data Architecture, 4) Capital Budget - Voice and Data, and 5) Life-Cycle Budget - Voice and Data.

3.1 Physical Infrastructure

3.1.1 Table V shows the classification of the 174 TRs examined during the physical surveys.

Table V Classification of Telecommunication Rooms in the Physical Survey		
<i>Treatment</i>	<i>Number of TRs</i>	<i>Average Cost</i>
None / Limited Cost: Simply needing maintenance	34	\$2,000
Level A Remodel: Simple adjustments	50	\$15,000
Level B Remodel: More aggressive adjustments	27	\$21,000
Level C Remodel: Very aggressive adjustments	5	\$29,000
Abandon: TR should not be used	46	\$25,000
Rebuild: TR should be rebuilt	12	\$83,000
Total	174	\$21,227

3.1.2 Inside Copper Cable Plant

3.1.2.1 The majority of inside copper cable supporting the data network is Category 5 or better. The majority of the inside copper cable supporting voice services is Category 3 voice grade.

3.1.2.2 The District does not have a District-wide standard for all campuses to use. Therefore, there are different decisions made at each campus resulting in each campus managing its own stock, supplies, and technical support.

3.1.3 Outside Cable Plant

3.1.3.1 Most campus buildings are connected to the campus core voice and data systems with both copper and fiber optic cabling.

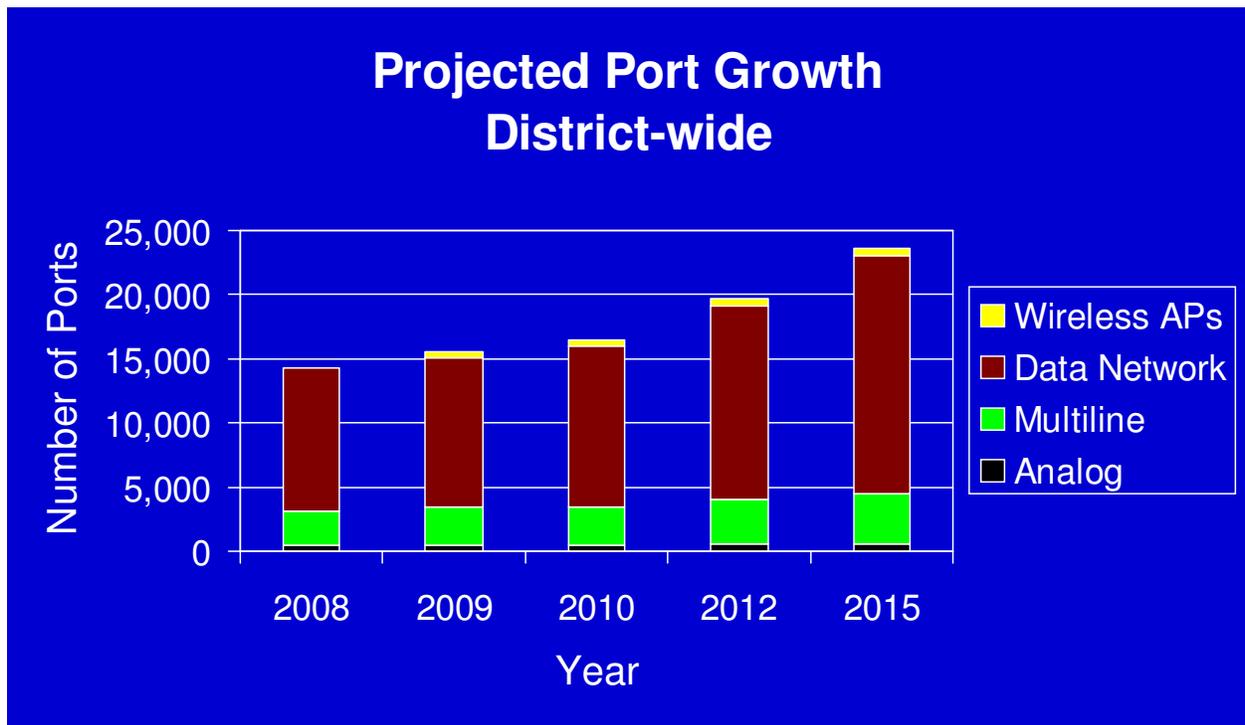

- 3.1.3.2 The existing outside copper cable will support growth to Capacity as forecasted in the Port Model. However, two of the campuses (CCC and DVC) report that portions of the outside plant copper cabling are affected by water damage. This has limited the available pair counts on several cables to the point that the copper cable does not support the number of telephones needed in certain areas of the campus.
- 3.1.3.3 Most fiber optic cabling is older 62.5 micron fiber that does not support speeds greater than 1 GB.
- 3.1.3.4 Most campuses have only one connection to the WAN for all campus buildings.
- 3.1.4 Migration to VoIP technology, whether partial or total, will be dependent upon completion of upgrades to the District TRs, fiber optic cable plant, and WAN connections to campuses.

3.2 Projected System Growth

The graph in Exhibit III shows the projected growth of District analog voice, digital voice, data network, and wireless access ports based on the Port Model.

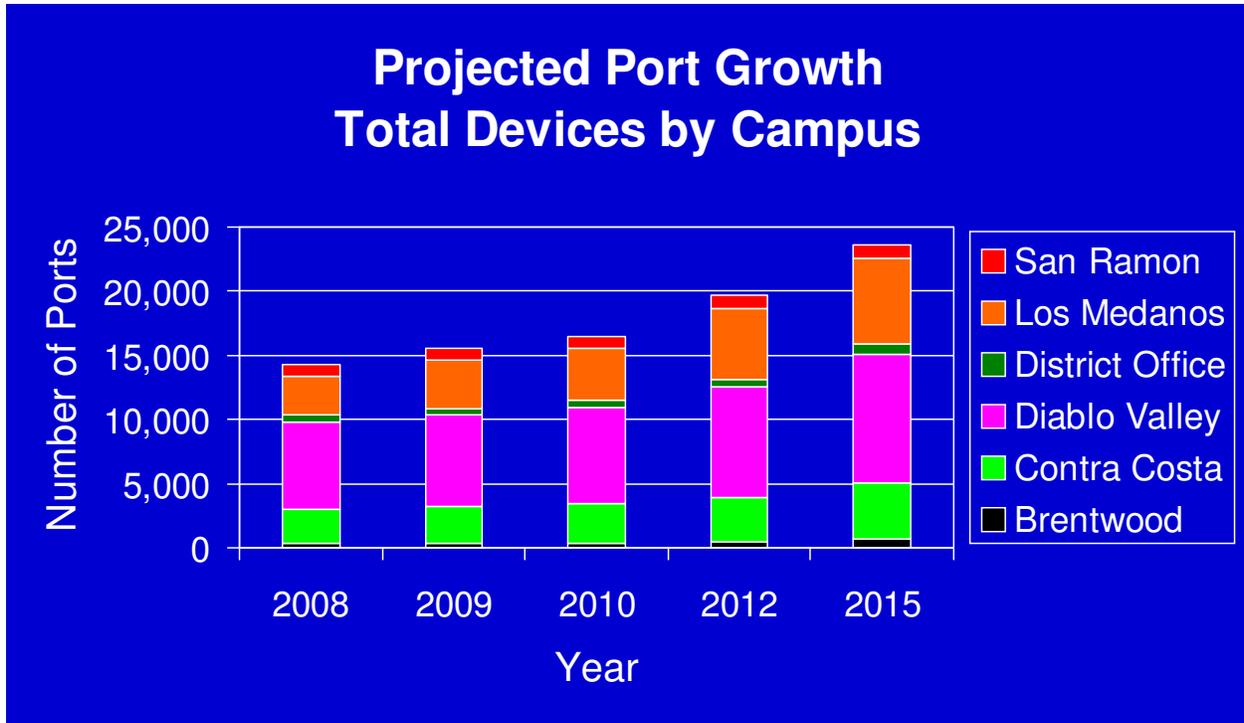

Exhibit III
Port Growth by Technology

The graph in Exhibit IV shows the projected growth of District ports by campus based on the Port Model.

Exhibit IV
Port Growth by Campus

3.3 Voice Architecture

3.3.1 The existing voice system, consisting of six separate Mitel systems, has been in operation for more than 10 years.

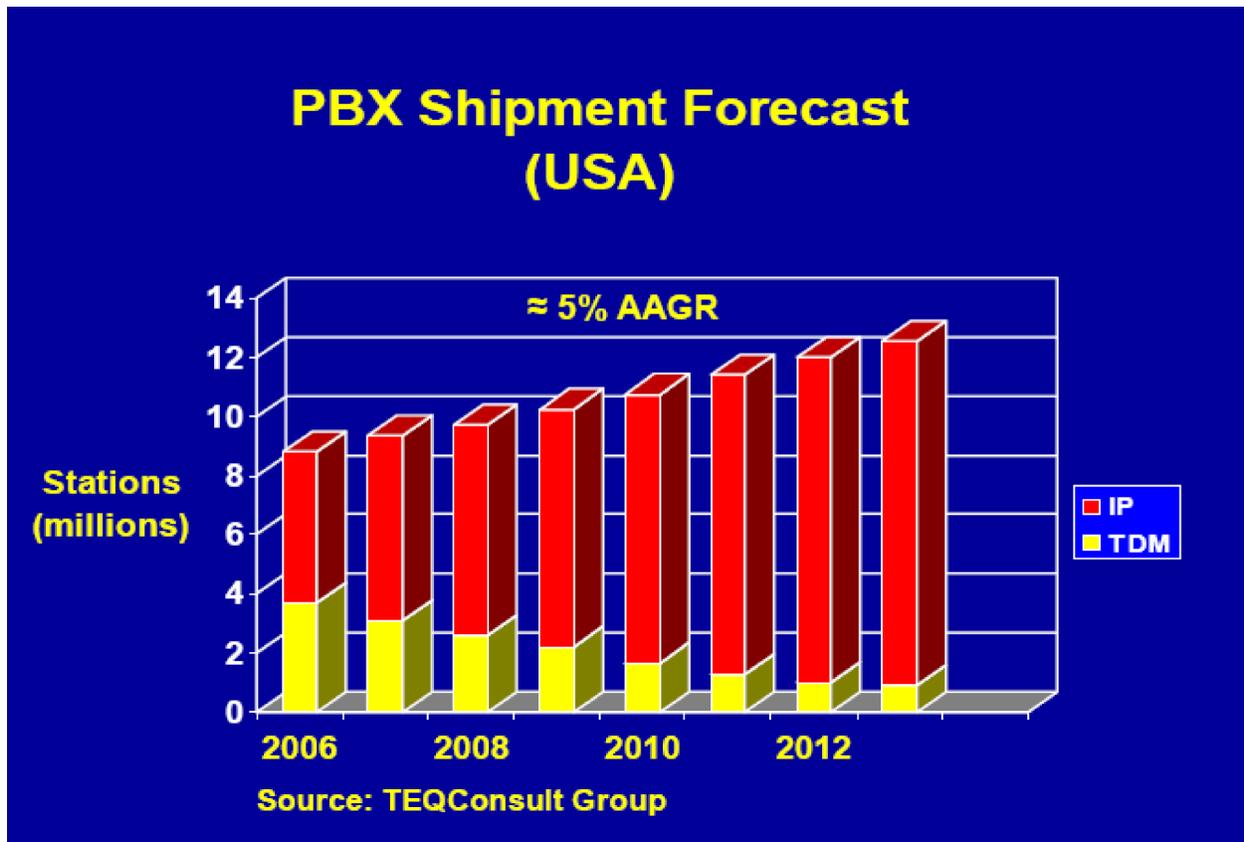

3.3.2 The existing Mitel systems would need major upgrades to either continue operation in Time Division Multiplexing (TDM) mode or upgrade to support new technologies such as VoIP. Mitel reported the following:

3.3.2.1 Mitel does not have a determined EOL (End of Life) at this time for the TDM product, nor any public release on when those will no longer be supported. We are certainly recommending IP to the majority of our customers.

- 3.3.2.2 Mitel has developed aggressive trade-in programs to encourage customers to migrate their voice systems from the TDM platform to the VoIP platform.
- 3.3.2.3 When asked “Is it safe to say that the client should upgrade to a VoIP capable system instead of putting all their upgrade money into the non-VoIP platform?” a Mitel direct engineer answered “It would be a smart choice, in my opinion.”
- 3.3.3 Research of the telecommunications industry confirms the comments from Mitel. Exhibit V shows the industries increasing migration to VoIP platforms in lieu of TDM platforms.

Exhibit V
Telecommunication Industry’s Shift to VoIP

3.4 Data Architecture

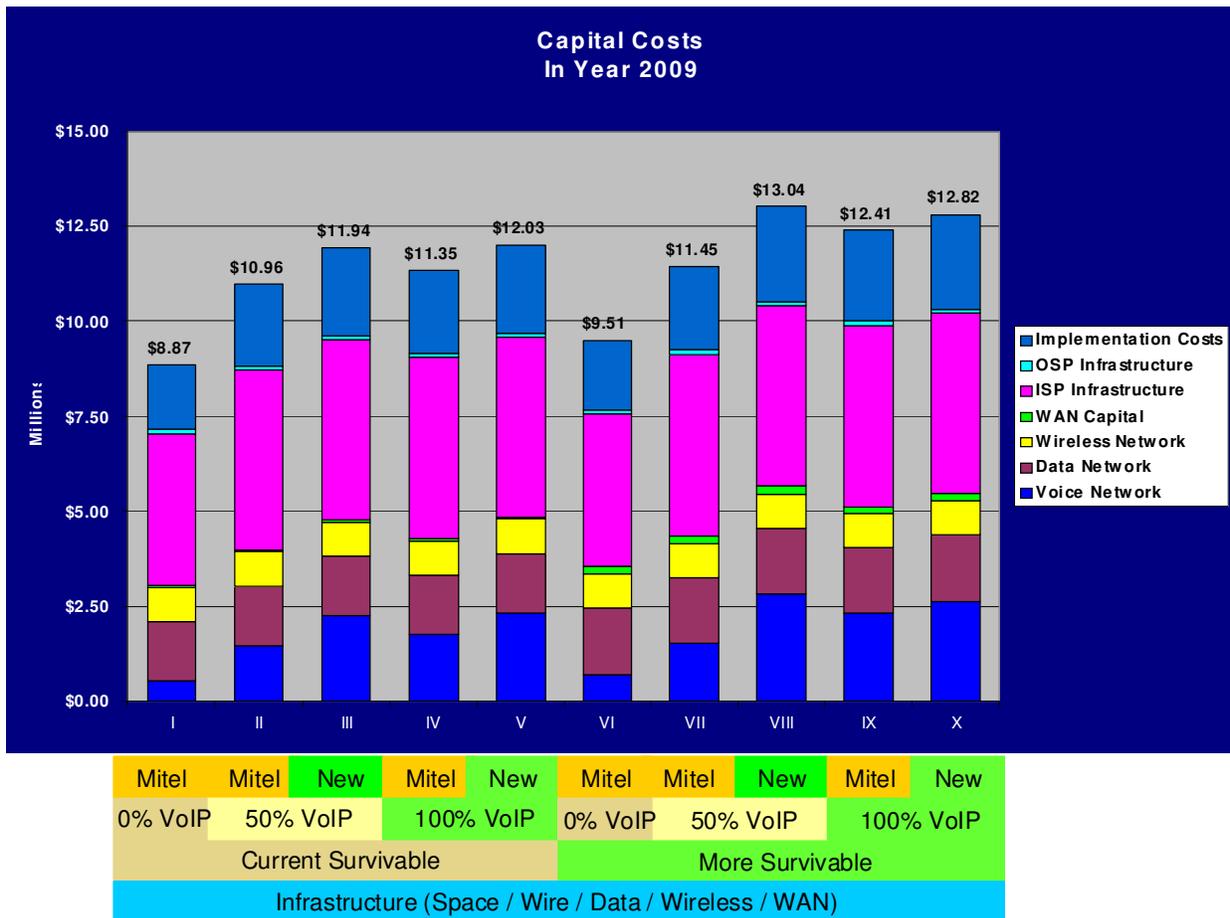

- 3.4.1 For the most part, campus LANs are managed by the individual campuses.
- 3.4.2 The existing non-unified approach to management of campus LAN Ethernet infrastructure would limit the District's strategic choices for its communications infrastructure and impede eventual migration to new voice technologies. Management of campus LAN Ethernet infrastructure refers to management of the distribution cable plant, the Ethernet horizontal and vertical riser cable plant, and the Ethernet LAN switches and routers. It does not include systems and applications connected to the LAN.
- 3.4.3 Establishing a common cable plant gives the District the most flexibility in choosing future technologies.
- 3.4.4 Migration to VoIP on a District-wide basis will require unified management of campus LANs.

3.5 Capital Budget - Voice and Data

3.5.1 Exhibit VI depicts the capital budget requirements for the ten voice and data configuration alternatives.

Exhibit VI
 Capital Cost for all Configurations

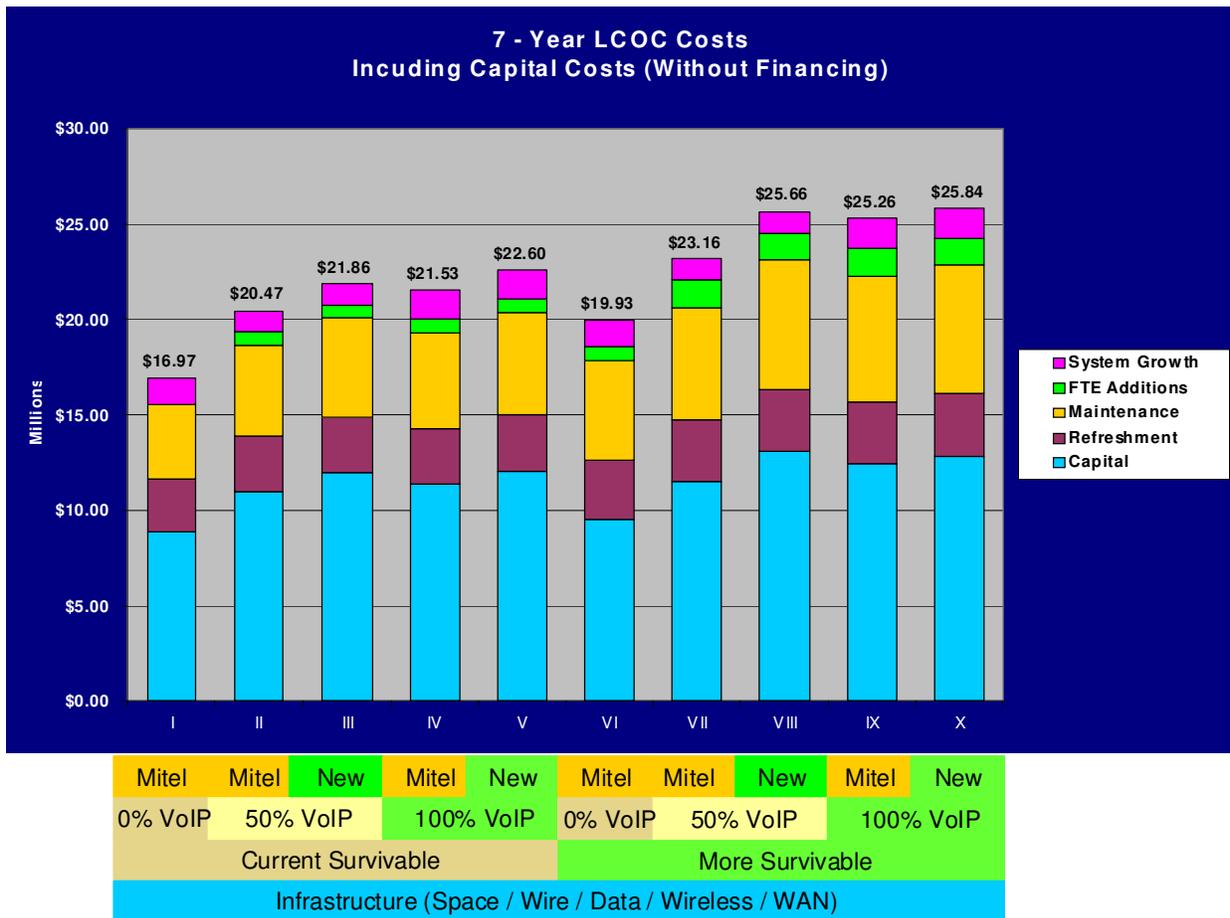

3.5.2 The capital budget details appear in Attachments II through VII.

3.6 Life-Cycle Budget - Voice and Data

3.6.1 Exhibit VII depicts the life-cycle budget requirements for the twelve voice and data configuration alternatives.

Exhibit VII
 7-Year Life-Cycle Costs for all Configurations

3.6.2 The life-cycle budget detail appears in Attachment VIII.

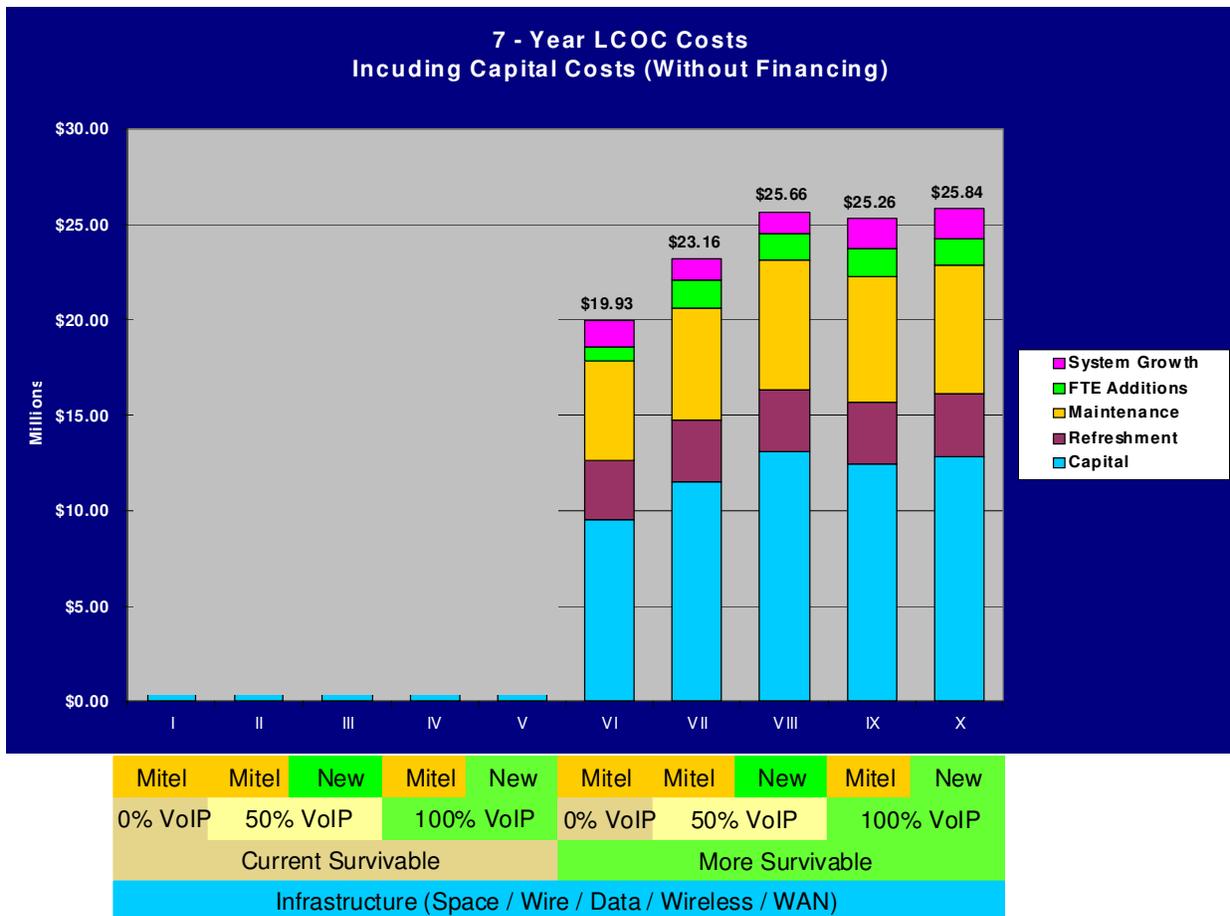

3.7 The Teams' Recommendation to the Cabinet

The Teams' findings and discussions determined the following conclusions:

- 3.7.1 Infrastructure changes throughout the District are required no matter what configuration is chosen.
- 3.7.2 The cost delta to develop a more survivable solution is relatively low compared to the overall cost of the solutions. Therefore the Working Group eliminated Configurations I-V from consideration. Exhibit VIII shows this change in the Configuration choices.

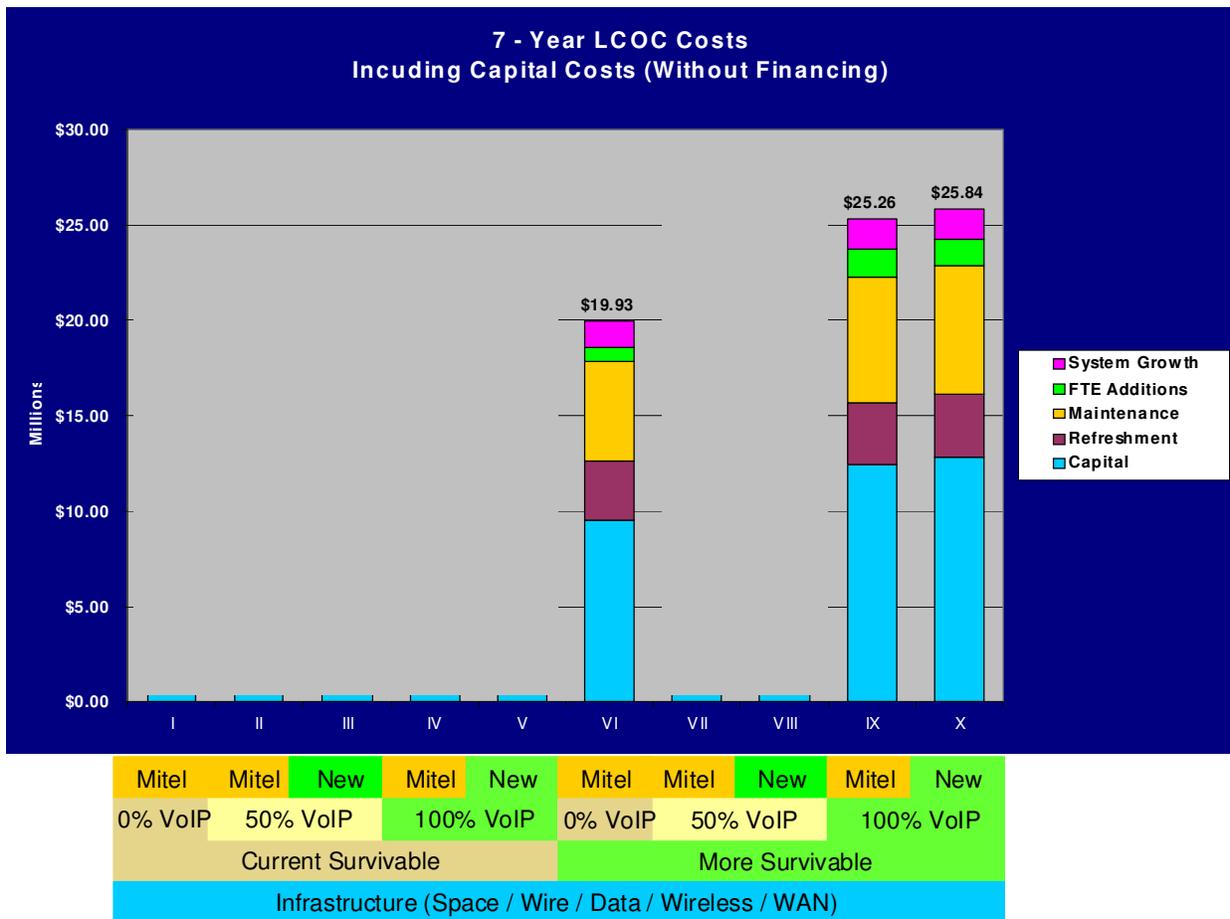

Exhibit VIII
 7-Year Life-Cycle Costs
 Without Less Survivable Configurations I through V

3.7.3 The cost savings of Configurations VII or VIII does not warrant the difficulty of managing the combination of TDM and VoIP technologies at the same time. Therefore, the Working Group eliminated Configurations VII and VIII. Exhibit IX shows this change in the Configuration choices.

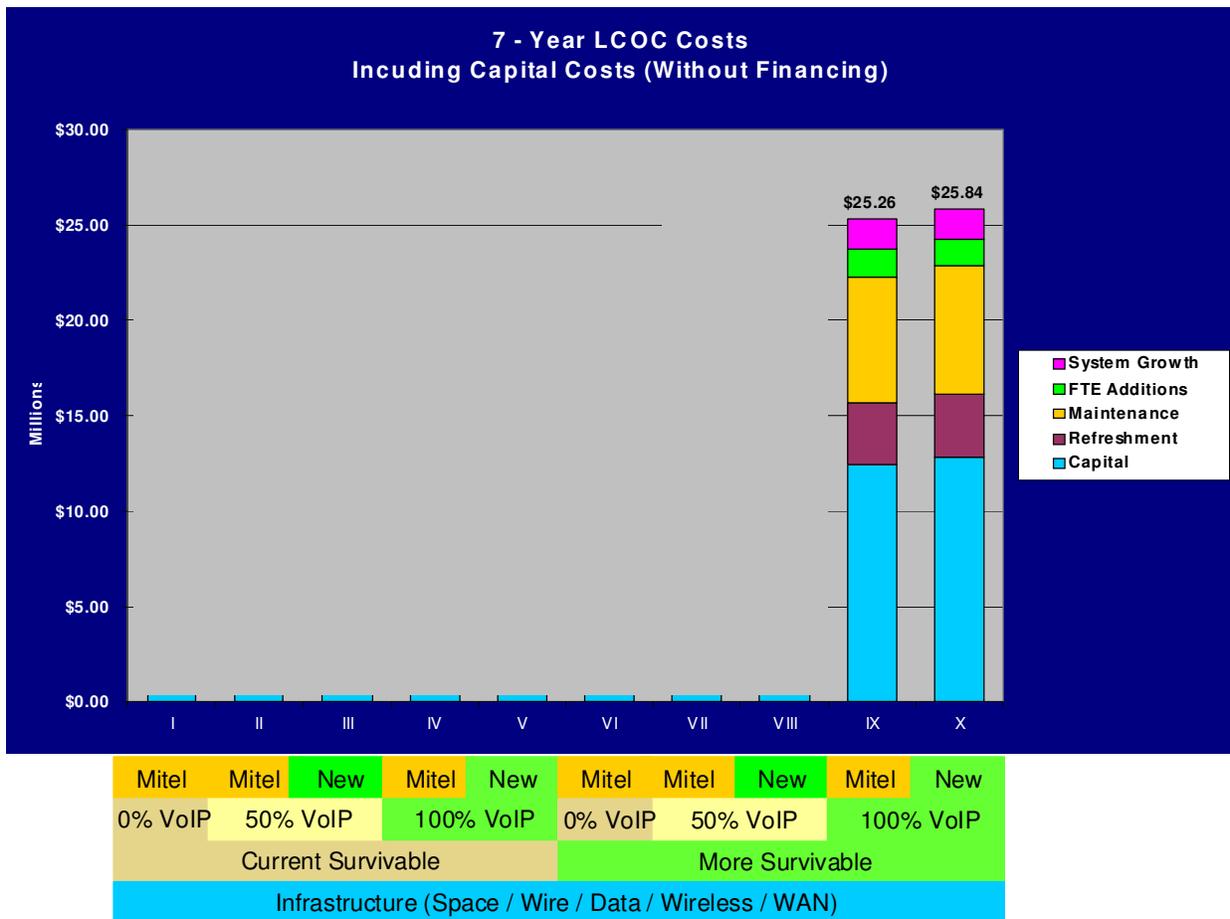

Exhibit IX
 7-Year Life-Cycle Costs
 Without Multi-Technology Configurations VII and VIII

3.7.4 After reviewing the trends in the industry of manufacturers migrating telephony systems to VoIP and the desire for the District to move toward the use of technology to facilitate a more unified approach to technology, the Working Group removed Configuration VI. Exhibit X shows this change in the Configuration choices.

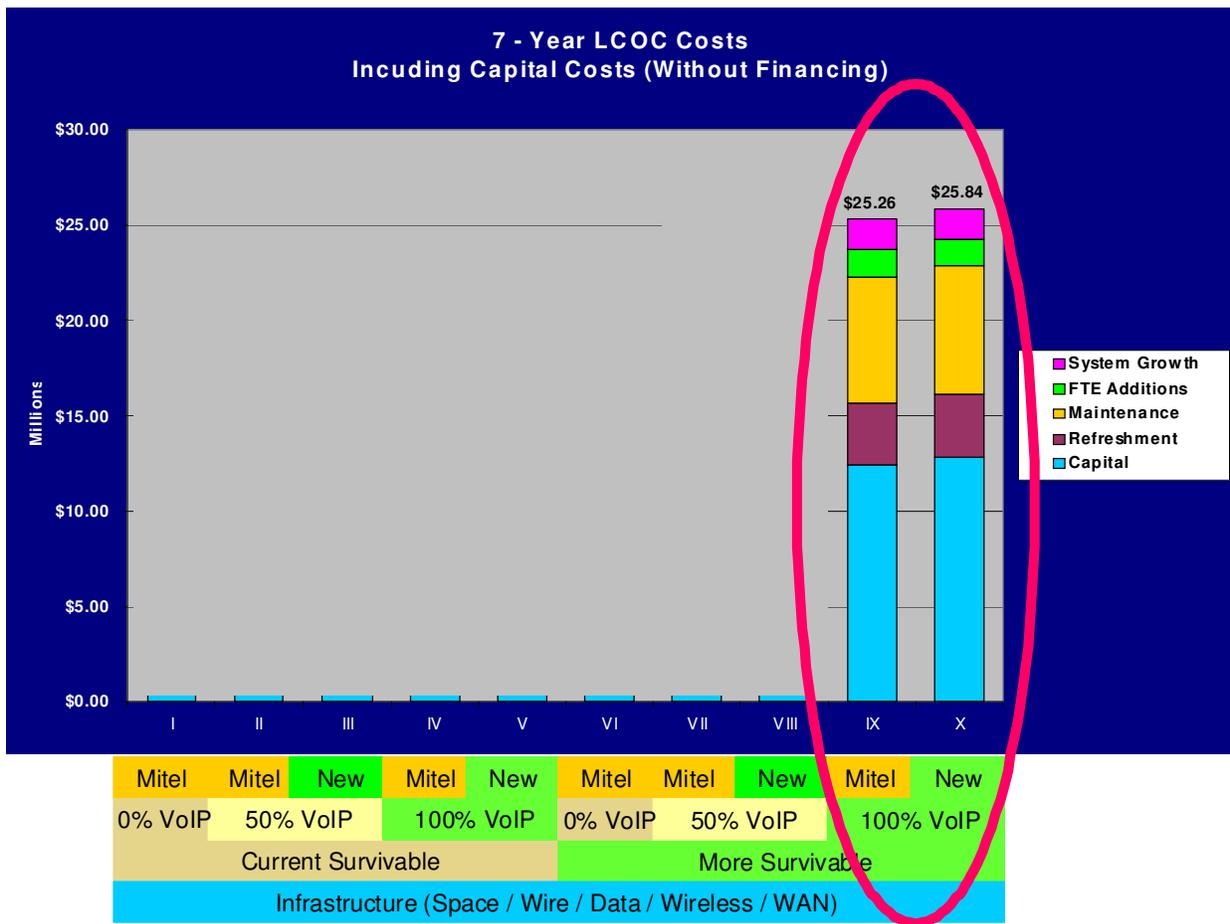

Exhibit X
 7-Year Life-Cycle Costs
 Without the Upgrade of Existing Voice Systems in Configuration VI

3.7.5 Configurations IX and X are actually the same. Configuration IX includes an upgrade of the existing Mitel systems to VoIP while Configuration X allows for the same configuration to any qualified manufacturer. The Working Group determined to recommend Configuration X as the solution that should be used for the upcoming request for proposal (RFP) process. Mitel suppliers would also be invited to respond to the RFP; therefore, the RFP process would actually include both Configurations IX and X.

Exhibit XI
 7-Year Life-Cycle Costs
 The Teams' Recommendation

3.8 Cabinet Review Meeting Results

After reviewing the capital costs, life-cycle costs, and recommendations from the Teams, the cabinet had the following comments and determined that the Working Group needed to do a few things before making a final decision to move forward:

- 3.8.1 Cabinet agrees with a more survivable solution.
- 3.8.2 Cabinet requested that the Working Group research:
 - 3.8.2.1 What remodeling efforts are already underway?
 - 3.8.2.2 What costs are already in District budgets?
 - 3.8.2.3 What are the benefits of pursuing VoIP?
 - 3.8.2.4 What are the ranges of costs when comparing Configurations VI and X?
- 3.8.3 Remodeling efforts already underway.

The Working Group compared the TR Profile Book information with the remodeling efforts already in progress throughout the district. Those TRs that are already slated to be remodeled or rebuilt through existing District efforts were removed from the capital cost models. This effort removed 23 TRs and \$1,064,782 from the infrastructure capital costs. Table VI shows the remaining 151 TRs after removing those that are incorporated in the existing District remodeling efforts.

Table VI Classification of TRs After Incorporating Existing Remodeling Efforts		
<i>Treatment</i>	<i>Number of TRs</i>	<i>Average Cost</i>
None / Limited Cost: Simply needing maintenance	34	\$2,000
Level A Remodel: Simple adjustments	47	\$14,500
Level B Remodel: More aggressive adjustments	20	\$20,500
Level C Remodel: Very aggressive adjustments	4	\$25,000
Abandon: TR should not be used	35	\$25,000
Rebuild: TR should be rebuilt	11	\$80,000
Total	151	\$20,052

3.8.4 Costs already in District budgets.

3.8.4.1 The Working Group reviewed existing budget cost reports to determine the costs that are already included in existing budgets. Those costs included:

- Maintenance costs
- Operational costs
- Upgrade costs

3.8.4.2 The results of this review identified \$1,480,255 that could be taken out of the life-cycle cost models. The Working Group decided not to remove this cost from the models because the cost is intuitively too low. The Working Group reports that many purchases of networking components have been made through capital improvements. Many of those purchases have not been tracked in a way that allowed the Working Group to identify all of the costs.

3.8.5 The benefits of pursuing VoIP.

3.8.5.1 Redundant Capabilities

- Redundant programming.
- Automatic Core failover / Self-correction techniques.

3.8.5.2 Unified Messaging

- Collaboration between the telephone and the computer allowing for more computer enhancements.

3.8.5.3 Mobile Applications

- Wireless VoIP telephones.
- Auto reconfigure of phones that are moved.
- Automatic updates of the E-911 database.

3.8.5.4 Converged Applications

- Softphones – Using the computer as the telephone.
- Integrated voice and Web conferencing.

3.8.6 Comparing Configurations VI and X (to review a range of costs).

3.8.6.1 Exhibit XII shows a side-by-side comparison of Configurations VI and X. The text shown in gold shows the major items where Configuration X differs from Configuration VI.

Exhibit XII
 Comparison of Configuration VI and X

	Configuration VI	Configuration X
Voice	Mitel Upgrade (software only)	New system or complete Mitel Upgrade
	New direct inward dial numbers	Same
	Single voice core	Redundant voice core
	No VoIP	All VoIP
Voice adjuncts	V.Mail, E911, ACD	V.Mail, E911, ACD, & Telemanagement
Data	No power over Ethernet	All power over Ethernet
	Redundant cores & Distribution	Same
Wireless	Full campus coverage	Same
WAN	AT&T MPLS redundant network	Same
Infrastructure	Remodel and rebuild rooms	Same
	Voice cable stays on old copper	Voice cabling replaced w/VoIP data
Staff	1 additional FTE for data/WAN	2 additional FTEs for data/WAN/VoIP

Contra Costa Community College District
District-Wide Strategic Infrastructure / Telecommunications Plan
Final Report

3.8.6.2 Exhibit XIII shows the new adjusted capital cost for Configuration VI and X after the reduction of existing infrastructure efforts that are already underway at the District.

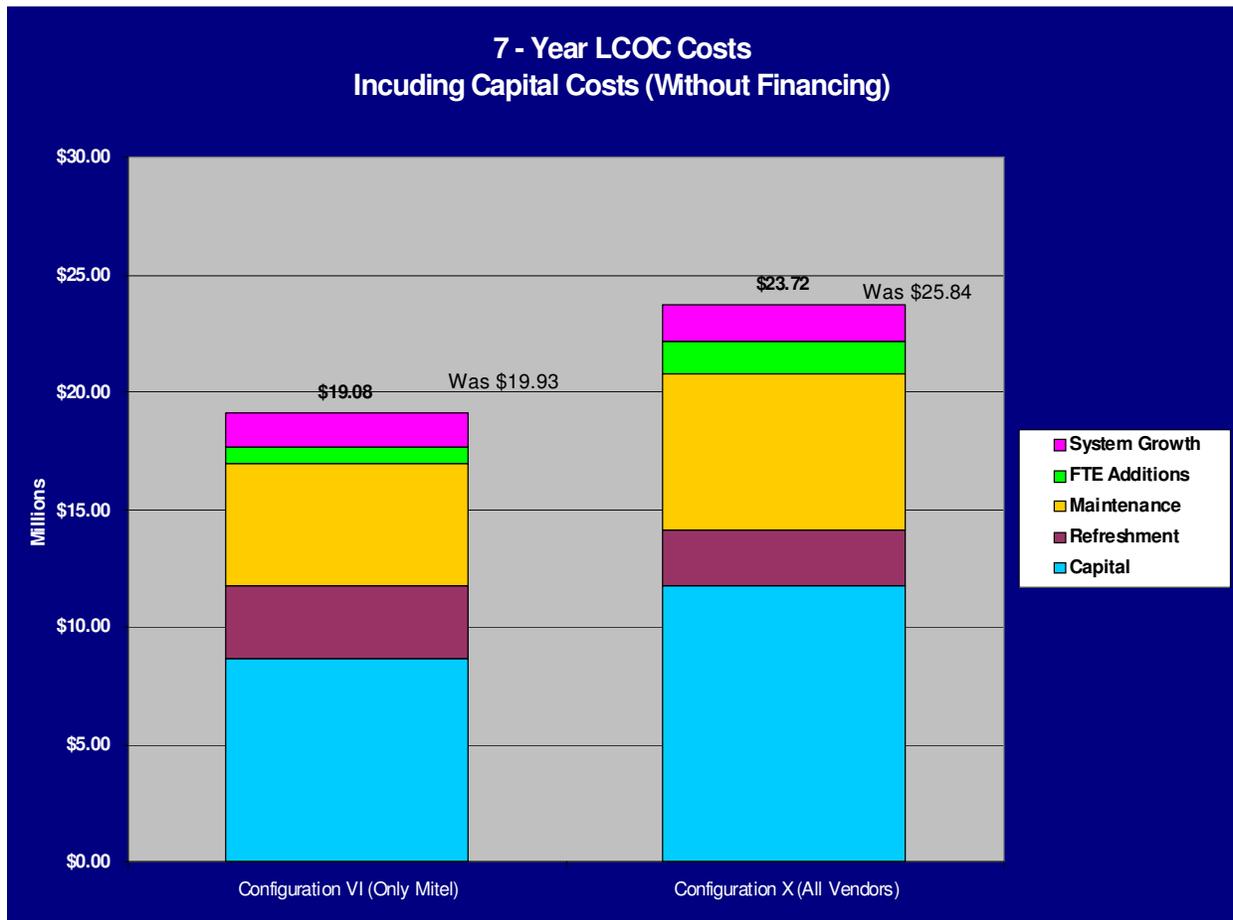

Exhibit XIII
Revised Capital Costs for Configurations VI and X

3.8.6.3 Exhibit XIV shows the new adjusted life-cycle costs for Configuration VI and X after the reduction of existing infrastructure efforts that are already underway at the District.

Exhibit XIV
7-Year Life-Cycle Costs for Configurations VI and X

3.8.6.4 After reviewing the information with the Cabinet, the Teams and the Cabinet agree that Configuration X is the strategic direction that the District should move toward.

3.9 Timing of Funds Model

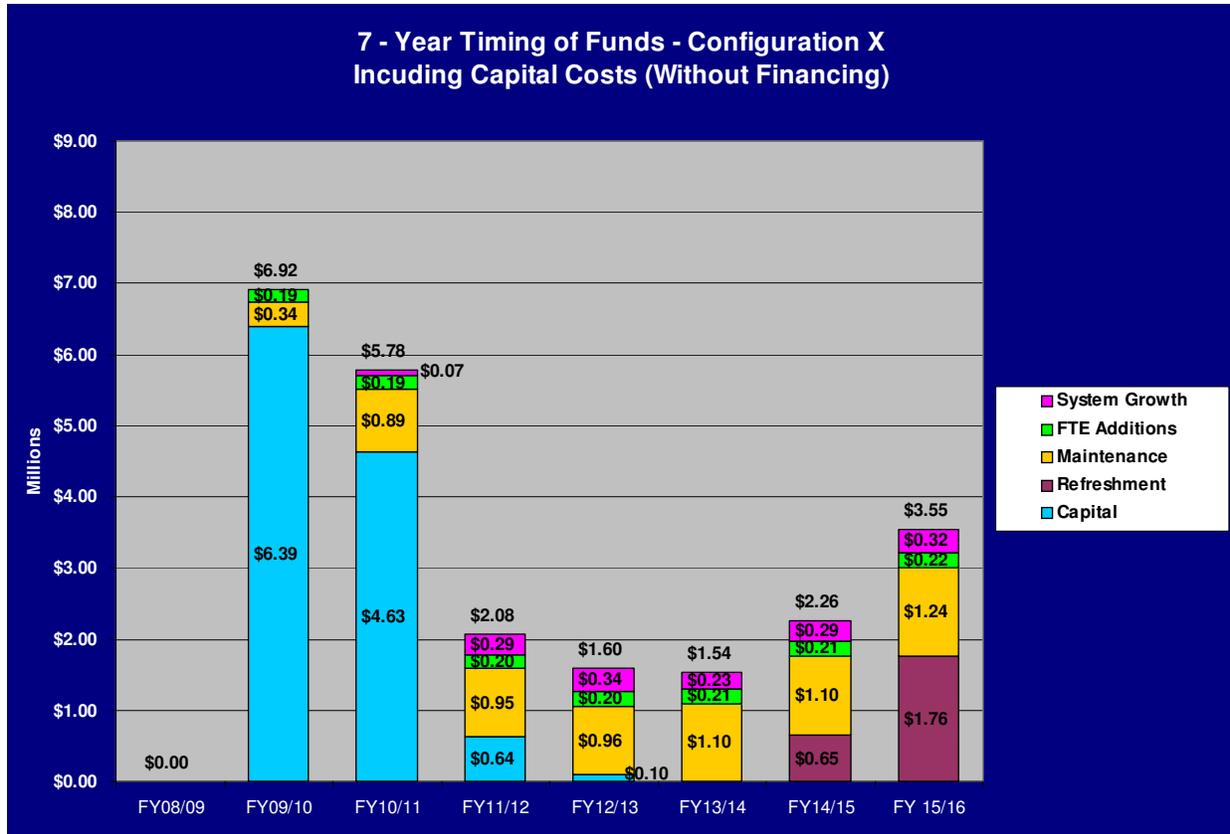

A Timing of Funds model was developed using Configuration X. The model calculates the annual cost of the systems over the 7-year planning horizon using the following assumptions:

- 3.9.1 Implementation will begin in the summer of 2009.
- 3.9.2 WAN implementation will span 6 months.
- 3.9.3 Telecommunication room modifications will span 4 years.
- 3.9.4 Voice and Data system implementation will span 2 years.
- 3.9.5 Wireless implementation: Do the wireless survey first, then phase in the coverage over 2 years.

Exhibit XV shows the timing of funds costs for Configuration X over the 7-year planning horizon. The details for the Timing of Funds model appear in Attachment IX.

Exhibit XV
 7-Year Life Timing of Funds Model (Configuration X)

4 Recommendations

Based on the findings and conclusions detailed in the previous sections, we make the following recommendations regarding the strategic direction of the District's Strategic Infrastructure / Telecommunications Plan.

4.1 Overall

- 4.1.1 Develop a District standard for infrastructure installation and maintenance for all campuses to follow.
- 4.1.2 Develop policies and standards for centralized or coordinated management of District local area wired and wireless networks. These policies and standards should address the physical spaces housing network equipment (e.g., rooms with routers and switches), the network cable plant, management of network devices, performance monitoring, network authentication, security, and WAN access.
- 4.1.3 Examine District budgets to identify ways to confirm the existing budgets for infrastructure, voice, data, wireless, and WAN systems at each campus. Additionally, examine how budget policies promote or discourage using technology consistent with District-wide strategic directions and to provide District services in more cost-effective ways.
- 4.1.4 Plan on capital fund expenditures based on the Timing of Funds model.

4.2 Infrastructure

Determine the critical infrastructure work that needs to be completed before the implementation of a new converged voice and data environment and begin the proposal process to aggressively complete that infrastructure work.

4.3 Voice

Develop a Request for Proposal (RFP) that represents Configuration X to migrate to a VoIP based voice telephony platform.

4.4 Data

- 4.4.1 Include a new local area network (LAN) technology in the RFP process. Use Configuration X to configure the data RFP so that the LAN will be capable of the new technologies needed.
- 4.4.2 Define the Local Area Network (LAN) technology needed through a review of the vendor solutions in the Voice RFP process. Use either another RFP process or State-provided purchasing systems to acquire the appropriate LAN configuration that will allow for the most redundant, cost effective LAN solution. Those technologies include VoIP, Wireless LAN, Video Conferencing, and Streaming Video.

4.5 Wireless

Include a new wireless LAN technology in the RFP process. Use the wireless system as a complimentary technology platform for each District campus.

4.6 Wide Area Network

- 4.6.1 Define the Wide Area Network (WAN) technology needed through a review of the vendor solutions in the RFP process. Use either another RFP process or State-provided purchasing systems to acquire the appropriate WAN configuration that will allow for the most redundant, cost effective WAN solution.
- 4.6.2 Monitor the deployment of video and other bandwidth intensive applications and the impact of these deployments on the utilization of the WAN infrastructure.

1 Purpose of the Work

Contra Costa Community College District (CCCCD) has engaged WTC Consulting, Inc. (WTC) to develop a District-wide Strategic Infrastructure/ Telecommunications Plan. The District has initiated this planning process with the goal of 1) improving the reliability of the District's infrastructure and 2) addressing the financial, technical, and operational impact of growth across multiple technology alternatives strategic to the District's business goals. This strategic planning process includes an assessment of the District's existing outside cable plant and in-building distribution systems, an assessment of potential District voice, LAN, and WAN services, and preparation of capital and life-cycle budgets for physical infrastructure, voice, LAN, video, and WAN alternatives.

2 Purpose of the Planning Assumptions

The engagement planning assumptions formalize the understanding of the project scope and provide consensus regarding specific issues pertaining to the engagement. The planning assumptions for this engagement will serve as a guide for the assessment processes and development of capital and life-cycle budgets for voice, LAN, video, and WAN alternatives.

3 Project Owner and Engagement Team

Contra Costa Community College District Chancellor's Cabinet is the project owner. The following individuals constitute the engagement teams:

Working / Steering Group:

- Ben Seaberry, Exec. Dean of Technology - DVC
- Robert Burns, Interim Exec. Dean of Technology - DVC
- Michael Becker, Technology Supervisor - DVC
- Anthony Crawford, Technology Supervisor - LMC
- Cherry Li-Bugg, Sr. Dean of Technology - LMC
- Katherine Ogden, Network Technology Manager
- Chris Wilson, Computer and Network Technician - SRC
- Tom Schlaich, Computer and Network Technician - CCC/DO
- Adam Jacobs, Information Security Officer
- Mojdeh Mehdizadeh, Associate Vice Chancellor/CIO
- James Eystone, Technology Manager - CCC
- Brian Adair, Director of Facilities
- Valorie Gale, Director of Purchasing

- Teddy Terstegge, Police Officer and Emergency Preparedness Coordinator
- Dennis Gravert, Faculty - LMC
- Kelly Ramos, Classified - CCC
- Kindred Murillo
- Chris Levias
- Albert Slater, WTC
- Dean Oyama, WTC
- Zahid Massod, WTC
- Phillip Beidelman, WTC

Policy Group:

- Chancellor's Cabinet

4 Engagement Schedule

The Project Team expects to complete this engagement by the end of December 2008.

5 Engagement Deliverables

5.1 Planning Assumptions Document.

5.2 Physical Infrastructure Assessment.

5.2.1 Port Model™ sizing document.

5.2.2 Inside plant and outside plant capital budgets.

5.2.3 Telecommunication Room (TR) Profile Book for the TRs that are physically reviewed.

5.2.4 Presentation to senior management regarding findings, conclusions, and recommendations for the physical infrastructure.

5.3 Voice, LAN, Video, WAN Assessment.

5.3.1 Capital budgets for each configuration alternative.

5.3.2 Life-cycle budgets for each configuration alternative.

- 5.3.3 Presentation of capital and life-cycle budgets and graphs to the Project Team.
- 5.3.4 Final report.
- 5.3.5 Presentation of final report to the Project Team.
- 5.3.6 Presentation of final report to senior management.

6 Planning Horizon

The planning horizon is seven years starting in fiscal year 2009. The fiscal year starts on July 1 and ends on June 30.

7 Contra Costa Community College District Campuses

- 7.1 Campuses in scope of this engagement.
 - 7.1.1 District Office
500 Court Street, Martinez, CA 94553
 - 7.1.2 Contra Costa College
2600 Mission Bell Drive, San Pablo, CA 94806
 - 7.1.3 Diablo Valley College
321 Golf Club Road, Pleasant Hill, CA 94523
 - 7.1.4 Los Medanos College
2700 East Leland Road, Pittsburg, CA 94565
 - 7.1.5 Brentwood Center
101 Sand Creek Road, Brentwood, CA 94513
 - 7.1.6 San Ramon Valley Center
1690 Watermill Road, San Ramon, CA 94583

7.2 Campuses not in scope of this engagement.

7.2.1 Walnut Creek Center (WCC) (Regional Training Institute)

1250 Arroyo Way, Walnut Creek, CA 94596

8 Existing Port Counts (voice, data, wireless, CATV)

Following are the assumptions for developing a representative port count by telecommunication room for each in-scope technology:

8.1 Voice Ports.

The survey team will document the copper cabling installed in each TR and compare the cabling to the total ports available on the campus telephone system. Then the estimated ports per TR will be developed.

8.2 Data Ports.

The survey team will survey the actual data network ports available and used for each TR.

8.3 Wireless Access Points.

The survey team will not estimate the existing wireless access points. Wireless solutions will be included in the cost models for each configuration alternative.

8.4 CATV Ports.

The survey team will identify CATV ports if those ports are included in existing voice and data TRs.

8.5 Special Circuit Assumptions.

Existing analog port counts will be used as an estimate for special voice circuits.

9 Sizing Rules and Growth Calculations

9.1 The governing document for system sizing and growth calculations will be the Port Model.

- 9.2 Growth projections are defined for the following points during the planning horizon.
- 9.2.1 Working @ Cut (Year 1 - 2009): This is the expected number of devices that must be supported at the time of cut-over.
 - 9.2.2 Equipped (Year 2 - 2010): The system will be sized to reflect a growth rate during the first 24 months after installation. This size will be referred to as the "Equipped" size. For voice, growth from installation to this size will only require the installation of telephone instruments and associated station wire for needed telephone set additions. For data, growth from installation to this size will only require installation of the associated horizontal wire for new connections and activation of connections. All hardware and software to accommodate this growth will be resident in the system.
 - 9.2.3 Wired (Year 4 - 2012): The system will be sized to reflect a growth rate during the first 48 months after installation. This size will be referred to as the "Wired" size. For voice, growth from installation to this size will require the installation of telephone instruments and associated station wire, as well as purchase of port cards. Shelf space needed to accommodate these hardware and software additions will be in the system, and the expansions can be made without the purchase of new cabinets, main processors, or other major items. For data, growth may require the addition of network equipment and racks.
 - 9.2.4 Capacity (Year 7 - 2015): The system will be sized to reflect a growth rate in users during the system's 7-year planned life. This size will be referred to as "Capacity." For voice, growth up through Capacity may require major additions of items such as cabinets and main processors; however, the system will be able to accept the growth using available floor space without requiring the addition of separate, nonintegrated systems and without upgrading the UPS/rectifier and batteries. For data, growth through Capacity may require major additions of racks, wiring, and network switches. However, the system must be able to accept the growth without requiring redesign of the deployed data network infrastructure and must accommodate growth with existing floor space.

9.3 Each building is assigned a voice port growth type and data port growth type of low, medium, or high. Tables I and II show the treatment for each of these growth types. Growth percentages are not cumulative; all percentages are applied to the Working @ Cut port count.

Table I Growth Treatment for Data Network					
		<i>Working @ Cut</i>	<i>Equipped</i>	<i>Wired</i>	<i>Capacity</i>
<i>Growth Type</i>	<i>2008</i>	<i>At Year 1 2009</i>	<i>At Year 2 2010</i>	<i>At Year 4 2012</i>	<i>At Year 7 2015</i>
Low	Data from District	1%	3%	10%	20%
Medium	Data from District	2%	10%	30%	60%
High	Data from District	4%	20%	50%	100%

Table II Growth Treatment for Voice Network					
		<i>Working @ Cut</i>	<i>Equipped</i>	<i>Wired</i>	<i>Capacity</i>
<i>Growth Type</i>	<i>2008</i>	<i>At Year 1 2009</i>	<i>At Year 2 2010</i>	<i>At Year 4 2012</i>	<i>At Year 7 2015</i>
Low	Data from District	0%	1%	2%	5%
Medium	Data from District	1%	2%	5%	10%
High	Data from District	1%	3%	10%	20%

10 Planned Capital Projects

Table III shows the District's planned capital projects along with the projected number of floors, square footage, number of voice and data ports, data and voice growth classifications, WAN connection, and the year the building is expected to come on-line.

Contra Costa Community College District
 District-wide Strategic Infrastructure/Telecommunications Plan
 Planning Assumptions

- 11.2 The District will provide one or more staff members familiar with the TRs in District buildings to accompany WTC staff during the physical survey process.
- 11.3 The District will propose an ordering of the buildings for the survey to minimize travel time.
- 11.4 WTC's assessment will be based on our best judgement on a per TR per building basis developing three solutions for each TR: 1) Non-Combined, 2) Combined, and 3) BICSI as a rule. The judgement criteria are shown in Table V - TR Treatment Alternatives.

Table V TR Treatment Alternatives			
<i>Description</i>	<i>BICSI As a Guideline for a Non-Combined Cable Plant</i>	<i>BICSI As a Guideline for a Combined Cable Plant</i>	<i>BICSI As a Rule for a Combined Cable Plant</i>
Infrastructure Issues			
TRs per building	Each designated building should have at least one TR. For small spaces or spaces with special restrictions (e.g., historical buildings), a TR may be a cabinet.	Each designated building should have at least one TR. For small spaces or spaces with special restrictions (e.g., historical buildings), a TR may be a cabinet.	Each designated building must have at least one TR.
TRs per floor	TRs are needed, at a minimum, on every third floor. High densities of cabling in an area might dictate more than one TR per three floors.	TRs are needed, at a minimum, on every third floor. High densities of cabling in an area might dictate more than one TR per three floors.	Each floor must have at least one TR.
Floor space served by the TR	A TR can serve more than 10,000 square feet as long as all cable lengths (TR termination to wall plate) are less than 250 feet.	A TR can serve more than 10,000 square feet as long as all cable lengths (TR termination to wall plate) are less than 250 feet.	No TR can serve more than 10,000 square feet of net assignable space.
Overall assumptions for each TR	The data racks are standard 19-inch racks x 7 feet high, floor- and top-braced, with working clearance around the rack. Wall field is calculated to accommodate five feet of termination equipment installed on continuous open wall space. The TR should conform to National Electric Code standards. For small spaces or spaces with special restrictions (e.g., historical buildings), a TR may be a cabinet.	The data racks are standard 19-inch racks x 7 feet high, floor- and top-braced, with working clearance around the rack. Wall field is calculated to accommodate five feet of termination equipment installed on continuous open wall space. The TR should conform to National Electric Code standards. <i>Description</i>	<i>BICSI As a Guideline for a Non-Combined Cable Plant</i>	<i>BICSI As a Guideline for a Combined Cable Plant</i>	<i>BICSI As a Rule for a Combined Cable Plant</i>
Humidity range	A non-condensing environment. Drip pan from above if leaks from above are possible	A non-condensing environment. Drip pan from above if leaks from above are possible	30% to 55%
HVAC solutions allowed	Ventilation system to keep temperature below 85 F. Temperature-controlled exhaust fans should not be used unless the TR has less than 96 ports at capacity.	Ventilation system to keep temperature below 85 F. Temperature-controlled exhaust fans should not be used unless the TR has less than 48 ports at capacity.	24 hours a day x 7 days a week HVAC with positive pressure and a minimum one air change per hour. Accomplished with building or dedicated room HVAC.
TR electrical	TR must have two dedicated 20 amp outlets.	TR must have two dedicated 20 amp outlets per 19-inch rack.	TR must have two dedicated branch circuits with each having two duplex outlets and a separate duplex outlet for tools and test equipment.
Racks and equipment must be properly grounded.	Yes	Yes	Yes
TR lighting	Coverage so that both sides of the racks are lit - lighting should not interfere with cabling into the room.	Coverage so that both sides of the racks are lit - lighting should not interfere with cabling into the room.	Coverage so that both sides of the racks are lit - minimum 50-foot candles, 3 feet above floor.
Shared use	No storage. No other utilities in TR (e.g., electrical panels, plumbing).	No storage. No other utilities in TR (e.g., electrical panels, plumbing).	TR must not be shared with any janitorial services or other storage. Equipment not related to the support of the TR (e.g., building electrical distribution, piping, duct work) should not pass through the TR.
Racks must be floor-bolted and top-braced.	Yes	Yes	Yes
Wall-mounted racks	Could be allowed for TRs that house less than 96 ports. If more than 96 ports, floor-mounted, 7-foot racks should be used.	Could be allowed for TRs that house less than 48 ports. If more than 48 ports, floor-mounted, 7-foot racks should be used.	Not allowed. Should be floor-mounted, 7-foot racks.
Security	TR needs master key that does not allow access by other departments. A keypad or badge access control system is required.	TR needs master key that does not allow access by other departments. A keypad or badge access control system is required.	TR needs master key or card swipe system.

Table V TR Treatment Alternatives			
<i>Description</i>	<i>BICSI As a Guideline for a Non-Combined Cable Plant</i>	<i>BICSI As a Guideline for a Combined Cable Plant</i>	<i>BICSI As a Rule for a Combined Cable Plant</i>
Technology Design Considerations			
Voice and data have to be consolidated in the same TRs.	Not required	Yes	Yes
If the TR needs electrical, the TR will be built to accommodate inline power electronics.	No	Yes	Yes
If the TR needs HVAC, the TR will be built to accommodate Inline power electronics.	No	Yes	Yes
Wall field terminations	Must be above 1 foot and below 6 2 feet.	Must be above 1 foot and below 6 2 feet.	Must be above 1 foot and below 6 2 feet.
Access to the TR	Should be from a publicly accessible corridor.	Must be from a publicly accessible corridor.	Must be from a publicly accessible corridor.

12 Existing Voice System

- 12.1 All campuses have Mitel telephone systems with their own Octel voice mail system.
- 12.2 The Octel systems are old, at storage capacity, and not capable of upgrades.
- 12.3 There are no centralized attendants or operators for routing calls.
- 12.4 There is a mix of analog (single line) and digital (multi-line).
- 12.5 There are no ACD systems.
- 12.6 There are no local E911 systems; local trunks are used to call 911 and the campus address is delivered to the PSAP.
- 12.7 The District has no key systems.

13 Existing LAN and WAN

- 13.1 The existing campus LANs support either 10 MB, 100 MB, or 1000MB connections.
- 13.2 The District's goal is a minimum of 100 MB for all connections.
- 13.3 Since network switches supporting 10/100/1000 MB are becoming the standard vendor offering, migration to network switches supporting 1 GB will be reflected in the refresh cycle for the data network.
- 13.4 Each campus has its own isolated core with a WAN connection to the District Office.
- 13.5 None of the campuses have a second core for redundancy.
- 13.6 There are no automatic back up systems. The District office backs up the data on tapes that are rotated to an off-site location.
- 13.7 There are no distribution systems on the campuses. Each building is connected to the core system in that campus via multimode or single mode cable.
- 13.8 The predominant backbone media is 62.5 micron multimode fiber optic cable.
- 13.9 Each campus is served with a DS3 WAN connection.

14 Wireless Services In Scope

Wireless as a convenience only.

15 Existing Cable TV

- 15.1 Cable TV is in scope and will be served through IPTV solutions.
- 15.2 None of the campuses have a headend CATV system.

16 Special Purpose Circuits and Networks

Contra Costa Community College District uses the following special purpose circuits and networks.

- 16.1 Each fire alarm uses two analog lines and these lines are included in the voice port count.
- 16.2 Elevator phones are included in the analog voice port counts.
- 16.3 Bluelight phones are included in the analog voice port counts.
- 16.4 Data port growth will reflect the possible addition of special circuit data ports for such systems as:
 - 16.4.1 Building automation systems.
 - 16.4.2 HVAC monitoring systems.
 - 16.4.3 Supervisory Control and Data Acquisition (SCADA) systems.
 - 16.4.4 Video surveillance systems.
 - 16.4.5 Door access systems.
- 17 Configuration Alternatives
 - 17.1 The configuration alternatives will address the following two physical infrastructure treatments:
 - 17.1.1 Separate cable plant for the voice and data networks.
 - 17.1.2 Combined cable plant for the voice and data networks supporting VoIP.
 - 17.2 The configuration alternatives will address the following three voice system alternatives:
 - 17.2.1 Keeping the current legacy Mitel systems.
 - 17.2.2 Replacing the current Mitel systems with an IP PBX hybrid voice solution.
 - 17.2.3 Replacing the current Mitel systems with a VoIP system.
 - 17.3 The configuration alternatives will address the following two levels of survivability:

17.3.1 Level 1: Existing level.

17.3.2 Level 2: More Survivability.

17.4 Table VI illustrates the configuration alternatives that will be addressed in this strategic planning effort. In all configurations the analog telephone ports will stay analog as they are today.

Table VI Configuration Alternatives					
Infrastructure	Combined Infrastructure: Prepare Common Cable Plant However, Do Not Deploy VoIP	Combined Infrastructure: Common Cable Plant for the Voice and Data Networks Using Partial Converged VoIP		Combined Infrastructure: Common Cable Plant for the Voice and Data Networks Using Converged VoIP

Survivability	I	II	III	IV	V
More Survivability	VI	VII	VIII	IX	X

17.5 Data network alternatives.

17.5.1 Upgrade LAN - No power over Ethernet (No POE).

17.5.1.1 This alternative will include the upgrade of all data network switches to non-POE 10/100 Megabit switches.

*Contra Costa Community College District
District-wide Strategic Infrastructure/Telecommunications Plan
Planning Assumptions*

- 17.5.1.2 All telecommunication rooms will have appropriate upgrades to support the data network such as HVAC, fiber riser cable, grounding, dedicated power, and rack space to support the data network growth over the planning horizon.
- 17.5.2 Upgrade LAN - 100% power over Ethernet (100% POE).
 - 17.5.2.1 This alternative will include the upgrade of all data network switches to POE 10/100/1000 Megabit switches that will support VoIP or other POE devices on every campus port.
 - 17.5.2.2 All telecommunication rooms will have appropriate upgrades to support the POE data network such as HVAC, fiber riser cable, grounding, dedicated power, and rack space to support the data network growth over the planning horizon.
- 17.5.3 For all configurations, CAT 3 data cable that is being replaced will be replaced with three CAT 6 cables.
- 17.5.4 A discount of 38% on data electronics will be used for cost models.
- 17.6 Telephony platforms.
 - 17.6.1 Continued Mitel solutions will be considered.
 - 17.6.2 Voice over Internet Protocol (VoIP) solutions through IPPBX or server-based systems will be considered.
 - 17.6.3 Open Source systems will not be included because the District does not want to develop their own telephony platform.
 - 17.6.4 IP Centrex solutions will not be considered because the District does not want to involve the LANs in a service level agreement with the telephone company to develop voice system delivery.
 - 17.6.5 All voice solutions will develop the system as one voice system serving all 6 campuses, not 6 separate systems.
 - 17.6.6 VoIP solutions can share the campus data network ports.

- 17.6.7 VoIP connectivity to the core systems can share the campus WAN connectivity.
 - 17.6.8 Multiple voice core systems can be developed on separate campuses and used as backup or alternate core routing.
 - 17.6.9 Adjunct systems such as voice mail, ACD, and E911 can be supported as one system over the entire enterprise.
 - 17.6.10 There must be harmonious dialing throughout the campuses.
 - 17.6.11 There must be DIDs to all extensions.
 - 17.6.12 Classroom phones will be added to the Port Models based on classroom information from the District.
 - 17.6.13 WTC will identify the technology management needs for the voice, LAN, and WAN, including billing management, for the purpose of projecting related budget requirements. A Technology Management Information System (TMIS) will be included in the cost models.
- 17.7 Convenience wireless.
- 17.7.1 All alternatives will include wireless access points (APs) throughout the campuses designed to satisfy the use of wireless data services in a convenience way. The term "Convenience" indicates that wireless will not be the primary source of data delivery and that the wireless APs will be available for part time convenience data connectivity when needed.
 - 17.7.2 The wireless APs will be designed using an average 60-foot radius distribution of APs throughout the gross square footage area of campus buildings.

17.8 Video.

All alternatives will include IPTV Video capability for the data network. This will allow streaming video of selected channels through the data network to specific classes or rooms on the campuses.

17.9 Definition of Survivability.

17.9.1 Less Survivability.

For these configurations, WTC will model the continued survivability level that the District has developed to date.

17.9.2 More Survivability.

17.9.2.1 Develop a second WAN path from campus to district (or redundant systems), even if it went through another campus. The second connection should be another vendor.

17.9.2.2 Create a redundant core for voice and data systems at SRC.

17.9.2.3 Develop separate WAN entrances to each campus.

17.9.2.4 Increase the UPS up-time to 4-hours in the TRs (instead of the standard 2-hour UPSs)

18 Sizing for Services

WTC will address unified communications, Automatic Call Distribution (ACD) functionality, E-911, voice conferencing, and telemanagement.

18.1 Unified Communications and Automated Attendant

Table VII gives the sizing information for voice mail and unified communications.

Table VII Voice Mail and Unified Communications				
	<i>Working @ Cut</i>	<i>Equipped</i>	<i>Wired</i>	<i>Capacity</i>
<i>Category</i>	<i>At Year 1 2009</i>	<i>At Year 2 2010</i>	<i>At Year 4 2012</i>	<i>At Year 7 2015</i>
Estimated Mailbox Licenses	2500	2800	3000	4000

18.2 Automatic Call Distribution.

All configuration alternatives will have a fully-featured, customer-premise ACD.

18.3 The number of incoming and outgoing trunks will be based on a 17 to 1 ratio of stations to trunks.

19 Vendor Pricing

Voice and data network budget calculations will be based on representative vendor pricing and not a specific vendor's pricing.

20 Refreshment cycles to be modeled in the Life Cycle Cost Models.

20.1	Voice system hardware/software	7 years
20.2	Voice adjunct systems	5 years
20.3	Data core/distribution	5 years
20.4	WAN routers/switches	5 years
20.5	Data edge	5 years
20.6	Data UPS systems	4 years
20.7	802.11x Wireless systems	4 years

21 Services That Are Out of Scope

The following service equipment is out of scope for this engagement. The engagement will provide data network ports and fiber optic connectivity for these services under the title of "Special Networks."

21.1 Cellular service is out of the scope of this engagement.

21.2 CCTV equipment is out of scope.

21.3 Mechanical monitoring equipment is out of scope.

21.4 Light and environmental monitoring equipment is out of scope.

21.5 Electrical system monitoring equipment is out of scope.

22 Timing of Funds Assumptions

22.1 General Assumptions

- 22.1.1 Implementation will begin in the summer of 2009.
- 22.1.2 Voice and Data system implementation will span 2 years.
- 22.1.3 WAN implementation will span 6 months
- 22.1.4 Wireless implementation will span 2 years (DVC and LMC are already doing pretty well with wireless. CCC needs help sooner). Add the cost for the wireless survey first, then phase in the coverage over 2 years.
- 22.1.5 TR Construction for required rooms will span 2 years, although other rooms needing minor upgrades could be held off until the third year.
- 22.1.6 The Timing of Funds model will be based on Configuration X (as determined by the Working and Steering Groups on November 17, 2008)

22.2 Voice and data technology.

- 22.2.1 Minimum number of vendors that must be included.
 - 22.2.1.1 There should be one integrator, but there could be multiple vendors.
 - 22.2.1.2 The process must be competitive and not piggy backed on existing contracts.
 - 22.2.1.3 There must be at least 3 competitive bids.
- 22.2.2 Evaluation process rules.
 - 22.2.2.1 CCCCD can set up scoring rules and rating systems.
 - 22.2.2.2 The scoring should be published in the RFP.
- 22.2.3 After a technology RFP, a reasonable amount of time to allot for Board approval is 3 months.

22.3 Wide area networking technology.

22.3.1 Minimum number of Vendors that must be included.

22.3.1.1 May not need an RFP process.

22.3.1.2 Could use CALnet to supply the WAN options.

22.3.1.3 This is a quick process.

22.4 Construction of telecommunication rooms.

22.4.1 Construction bid process.

22.4.1.1 Under \$30k, CCCCD can negotiate with existing contractors.

22.4.1.2 \$30k - \$125k CCCCD can negotiate some in an informal way.

22.4.1.3 Over \$125k must be bid. This would be a renovation alteration Public Works bid.

22.4.1.4 CCCCD cannot split work on a campus, but could bid separate campuses in separate bids.

22.4.2 Construction acquisition rules.

22.4.2.1 Construction bids must have plans and specifications.

22.4.2.2 Bid time frame will be 45 - 60 days.

22.4.3 The average time for a remodeling project at the District (from Architectural design through start of construction) is between 3 - 6 months (includes Board approval).

22.4.4 If CCCCD wants to build a new TR in a building, CCCCD always needs Architects, Engineers, and General Contractors.

22.4.5 Rules for TR environmental items such as grounding HVAC ducting and added electrical.

22.4.5.1 This is called incidental work.

22.4.5.2 Assume, no District staff work.

*Contra Costa Community College District
District-wide Strategic Infrastructure/Telecommunications Plan
Planning Assumptions*

22.4.5.3 CCCCDC could package smaller work into less bids and work through those quicker.

22.4.5.4 Assume 1 - 2 months (Most likely only needs ratification).

22.4.6 Work can be split into phases to allow for smaller chunks and therefore an easier process.

22.4.7 Trouble areas.

22.4.7.1 Some projects need to go through a DSA minimum access review. Especially if it is over \$30k.

22.4.7.2 If DSA approval is needed, there is no way to tell how long this will take.

22.4.7.3 For bigger projects, assume an additional 2-3 months for DSA approval.

*Contra Costa Community College District
District-Wide Strategic Infrastructure / Telecommunications Plan
Final Report*

Attachment II

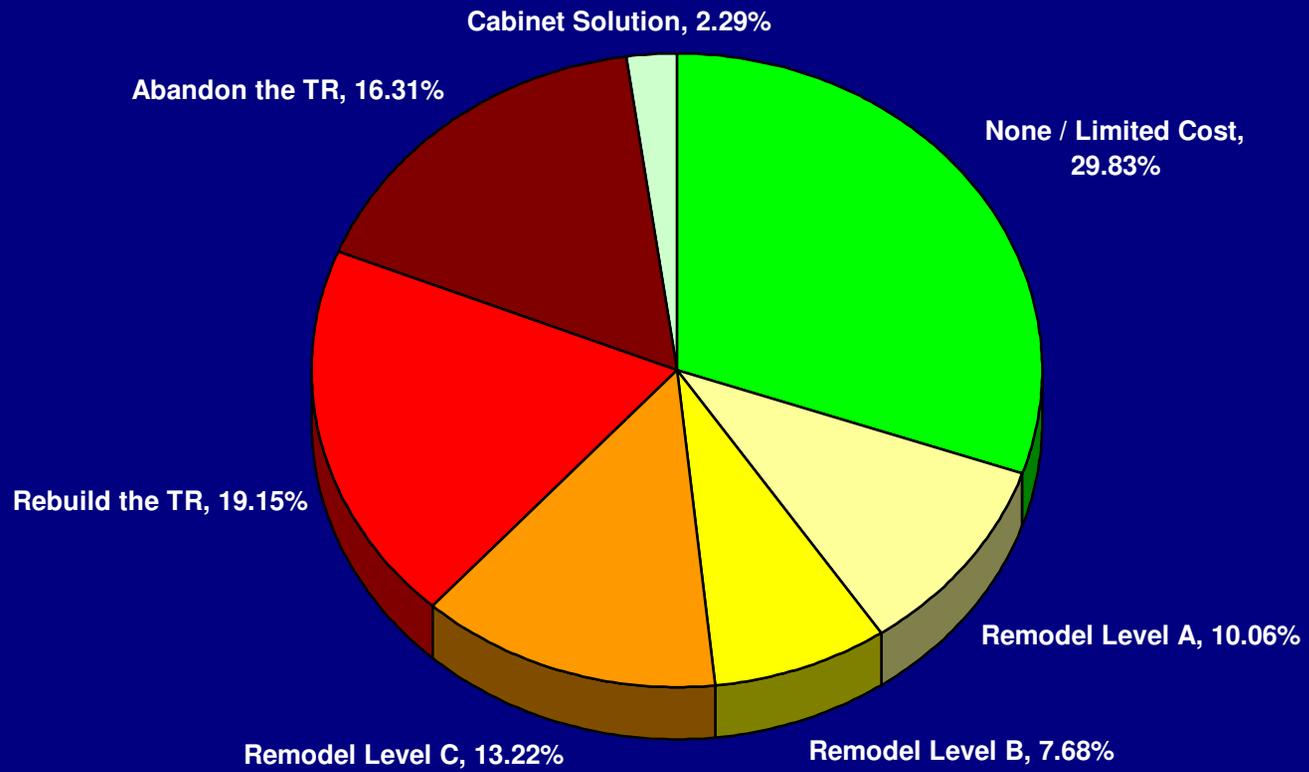

Infrastructure Capital Costs

Summary pages are included in the written report. The detailed data files are included on the accompanying CD.

	B	C	D	E	F
1	MASTER SUMMARY FOR ALL District BUILDINGS	ISP Model A	ISP Model B	ISP Model BICSI	Description Column
2		Configuration VI	Configuration X	None	
3		Converged Non-VoIP	Converged w/VoIP	Converged w/VoIP	
4		Legacy Mitel, LAN w/o In-Line Power, Wireless Overlay, More Survivable	100% VoIP Hybrid system, LAN w/ In-Line Power, Wireless Overlay, More Survivable	Industry Example	
5	ALL TRs				
6	Total "No Cost" TRs	20	15	15	TR meets sizing parameters, no cost for modifications at all.
7	Total "Limited Costs" TRs	19	19	17	TR meets sizing parameters, may require HVAC, electrical, or horizontal work.
8	Total Level A Remodel TRs	62	50	29	Needs a little work, such as grounding, cleanup, fireproofing, etc.
9	Total Level B Remodel TRs	23	27	38	Needs some work like Level A plus ceiling, reformatting racks, blocks, etc.
10	Total Level C Remodel TRs	4	5	15	Needs to be expanded but keep the TR in the same place (affects space).
11	Total "Rebuild" TRs	11	12	16	Move the TR to a new location, recable horizontal and riser.
12	Total "Abandon" TRs	16	46	44	Abandon the TR, recable horizontal to another TR.
13	Total Self-Contained Cabinets to Be Installed in Lieu of TRs	18	0	0	TRs that will receive Type 2 self-contained cabinets.
14	Total TRs (checking remodeling levels)	173	174	174	
15	Additional TRs That Need to Be Added to Meet the Alternative Requirements	0	0	0	Includes the new TRs that need to be added, not expanded or rebuilt.
16	Total Square Footage That Will Need to Be Added to Each Alternative	1,436	1,567	2,657	Includes janitor, storage, expanding, rebuilding, and adding new TRs.
17					
18	TR CONSTRUCTION:				
19	Remodel Level A Costs	\$ 371,000	\$ 329,000	\$ 203,000	Remodeling TRs (A Level)
20	Remodel Level B Costs	\$ 168,000	\$ 210,000	\$ 399,000	Remodeling TRs (B Level)
21	Remodel Level C Costs	\$ 48,000	\$ 64,000	\$ 240,000	Remodeling TRs (C Level)
22	Cost for Self-Contained Cabinets	\$ 93,500	\$ -	\$ -	
23	Rebuild Costs	\$ 233,400	\$ 256,500	\$ 330,600	Rebuilding TRs in new areas.
24	Additional TRs Needed Due to Large Area Covered	\$ -	\$ -	\$ -	Additional TRs needed due to large area covered.
25					
26	CLEARING TR AREA:				
27	Cost to Clear the Storage Out of the TR	\$ 5,000	\$ 5,000	\$ 5,500	This will affect building space and is added in to line 13.
28	Cost to Clear the Janitor Out of the TR	\$ -	\$ -	\$ 4,572	This will affect building space and is added in to line 13.
29					
30	TR ENVIRONMENTAL:				
31	Cost for Air Conditioning Units if Needed (based on sizing category)	\$ 168,000	\$ 174,000	\$ 226,000	water.
32	Cost for Dedicated Electrical Circuits if Needed (based on sizing category)	\$ 94,600	\$ 99,100	\$ 125,500	Cost for added dedicated electrical if needed.
33	Cost for Installation of Proper Key for the TR	\$ 9,500	\$ 7,200	\$ 7,900	Cost to re-key if the TR is not on certain eyes already.
34					
35	HORIZONTAL RECABLING DUE TO TR CONSTRUCTION:				
36	Recabling Horizontal Cabling Due to TR Rebuild or Building a New TR	\$ 360,090	\$ 422,730	\$ 711,945	Recabling horizontal voice and data cable when rebuilding a TR.
37	Recabling Horizontal Cabling for Abandoned TRs	\$ 495,831	\$ 879,690	\$ 1,041,015	Recabling horizontal voice and data cable when abandoning a TR.
38	Cost to install patch panels in an existing TR that does not have patch panels	\$ 147,135	\$ 147,135	\$ 185,300	
39					
40	HORIZONTAL RECABLING DUE TO CAT 3 DATA REPLACEMENT:				
41	Recabling Due to Cat 3 or Thinner in the TR	\$ 9,275	\$ 9,275	\$ 9,275	Recabling horizontal data cable when old cable was Cat 3.
42

This reflects the following switch reductions per the client:

- 50% DVC Reduced by this percentage because they already have good hardware and POE in 50% of the TRs (Per Client)
- 50% LMC Reduced by this percentage because they already have good hardware and POE in 50% of the TRs (Per Client)
- 100% SRC Reduced by this percentage because they already have good hardware and POE in 100% of the TRs (Per Client)
